## TITLE OF INVENTION

COMBINED PREPARATION OF ANTI-INFECTIOUSLY ACTIVE COMPOUNDS WHICH INHIBIT THE 2-C-METHYLERYTHROSE-4-METABOLIC PATHWAY, AND INHIBITORS OF LIPID METABOLISM

APPLICANT(S) FOR DO/EO/US

JOMAA, Hassan

Applicant herewith submits to the United States Designated/Elected Office (DO/EO/US) the following items and other information:

1. ☒ This is a FIRST submission of items concerning a filing under 35 U.S.C. 371.
2. ☐ This is a SECOND or SUBSEQUENT submission of items concerning a filing under 35 U.S.C. 371.
3. ☒ This express request to begin national examination procedures (35 U.S.C. 371(f)) at any time rather than delay examination until the expiration of the applicable time limit set in 35 U.S.C. 371(b) and PCT Articles 22 and 39(1).
4. ☒ A proper Demand for International Preliminary Examination was made by the 19th month from the earliest claimed priority date.
5. ☒ A copy of the International Application as filed (35 U.S.C. 371(c)(2))
  - a. ☒ is transmitted herewith (required only if not transmitted by the International Bureau).
  - b. ☐ has been transmitted by the International Bureau.
  - c. ☐ is not required, as the application was filed in the United States Receiving Office (RO/US).
6. ☒ A translation of the International Application into English (35 U.S.C. 371(c)(2)).
- ☐ Amendments to the claims of the International Application under PCT Article 19 (35 U.S.C. 371(c)(3))
  - a. ☐ are transmitted herewith (required only if not transmitted by the International Bureau).
  - b. ☐ have been transmitted by the International Bureau.
  - c. ☐ have not been made; however, the time limit for making such amendments has NOT expired.
  - d. ☐ have not been made and will not be made.
8. ☐ A translation of the amendments to the claims under PCT Article 19 (35 U.S.C. 371 (c)(3)).
9. ☒ An oath or declaration of the inventor(s) (35 U.S.C. 371(c)(4)).
10. ☐ A translation of the annexes of the International Preliminary Examination Report under PCT Article 36 (35 U.S.C. 371(c)(5)).

Items 11. to 16. below concern document(s) or information included:

11. ☐ An Information Disclosure Statement under 37 CFR 1.97 and 1.98.
12. ☐ An assignment document for recording. A separate cover sheet in compliance with 37 CFR 3.28 and 3.31 is included.
13. ☐ A FIRST preliminary amendment.  
☐ A SECOND or SUBSEQUENT preliminary amendment.
14. ☐ A substitute specification.
15. ☐ A change of power of attorney and/or address letter.
16. ☒ Other items or information: Post Card and Express Mail Certificate

09/720380

Combined preparation of anti-infectiously active compounds which inhibit the 2-C-methylerythrose-4 metabolic pathway, and inhibitors of lipid metabolism

The invention relates to combined preparations of anti-infectiously active compounds which inhibit the 2-C-methylerythrose-4 metabolic pathway as well as their salts and esters and of inhibitors of lipid metabolism and their simultaneous, separate or successive use in prophylactics and therapy of infectious processes in plants, humans, and animals as well as their use as herbicides. The lipid metabolism inhibitors according to the present invention suit in particular for the therapeutic and prophylactic treatment of infections by unicellular or multicellular parasites, fungi, bacteria or viruses as well as as herbicides.

The suitability of different organophosphoric compounds as well as of some of their esters and salts as pharmaceutical compositions is already known.

For example the antimicrobial efficacy of aminohydrocarbyl phosphonic acid derivatives against bacteria in humans and animals and against fungi in plants has been described (DE 27 33 658 A1, US 4,143,135, US 4,182,758 and US 4,206,156, US 4,994,447, US 4,888,330, US 4,210,635, US 3,955,958, US 4,196,193, US 4,268,503, US 4,330,529, US 5,189,030, US 3,764,677, US 3,764,676). Further substances of these groups have been described as herbicides (US 4,693,742, US 5,002,602, US 4,131,448, US 3,977,860, US 4,062,669), as algicides (US 3,887,353), as plant growth regulators (US 4,127,401, US 4,120,688, US 3,961,934, US 4,431,438, US 3,853,530, US 4,205,977, US 4,025,332, US 3,894,861) and as reagents in the production of pigments (US 4,051,175).

The application for example of aminohydrocarbyl phosphonic acid derivatives in the control of bacterial infections proved to be very difficult. Many bacteria which are responsible for ambulant infections and for infections which have been caught during a clinical stay are not sensitive to therapy by this group. Bacteria of the genus Staphylococcus belong to them, in particular the species Staphylococcus aureus. This germ of skin is a danger for the patient who stay in a clinic. Further studies including a phase IIa study of the applicant of the patent application DE 27 33 658 show a very quick built-up of resistance of the originally sensitive germs. Therefore these derivatives have not established in clinical application.

Further, also the use of bisphosphonic acids and some of their derivatives in pharmaceutical compositions is already known. Up to now, the microbiostatic efficacy of bisphosphonic acids (DE 3 611 522), their efficacy in the treatment of disorders in the calcium and phosphate metabolic pathway (DE 2 534 390, DE 2 534 391, DE 3 334 211, DE 3 434 667, DE 2 745 083), the cytostatic efficacy (DE 3 425 812), their lipid lowering efficacy (Arzneimittelfor-

schung 46, 759-62) and their capacity for stimulating immunocompetent cells (WO 97/38 696) is known.

The antimicrobial efficacy of fosfonochlorine against bacteria and an effect of foscarnet against viruses have been described. Further, the suitability of fosamine ammonium and N,N-dimethyl-(hydroxy-2-oxo-2-methoxyethyl) phosphonoamide as herbicides have been reported.

The use of inhibitors of the lipid metabolism is a for a longer time past accepted and widespread principle of treatment. These inhibitors are used for reducing the risk of heart and vascular diseases caused by hyperlipidaemia. The pharmacotherapy of said hyperlipidaemia in general is based on regulating the intake and controlling the synthesis of fats or in particular of cholesterol. Generally the synthesis of cholesterol is controlled by enzyme  $\beta$ -hydroxymethylglutaryl-CoA reductase (HMG-CoA reductase). In general the self synthesis of cholesterol is higher than the intake by food. (Berthold H.K., of Bergmann K., Dtsch. Med. Wochenschr. 121, S. 729 (1996); Richter W.O., Fortschr. med. 114, S. 177, 193)

Anion exchangers and  $\beta$ -sitosterol are known for controlling the intake of fats from the digestive tract. The ion exchangers contain cholestyr amine and colestipol. They resorb bile acids and thereby interrupt the entero hepatic return transportation and thereby cause a significant increase of sterolene in faeces.  $\beta$ -Sitosterol is a phytogenic sterol structurally related to cholesterol. It inhibits the resorption of food cholesterol at the intestinmucosa.

Further, nicotinic acids and their derivatives, clofibrate and their derivatives and probucol have been used for controlling the lipid metabolism or the prevention of subsequent diseases of hyperlipidaemia. Nicotinic acids and nicotinic acid derivatives lead to a lowering of fatty acids, triglyceride and cholesterol. Up to now the mechanism is not known. The ethyl ester of clofibrin acid, clofibrate and derivatives as well as analogues lead to a lowering of cholesterol, the mechanism of action is also not known. Also the mechanism of action of probucol is not clarified.

For controlling the synthesis HMG-CoA synthetase inhibitors (US 50 64 856, US 47 51 237), HMG-CoA reductase inhibitors (US 38 18 080, US 39 83 140, US 40 49 495, US 41 37 322, US 42 55 444, US 41 98 425, US 42 62 013, US 42 31 938, US 43 75 475, US 43 46 227, US 44 106 29, US 44 447 84, US 44 50 171, US 45 54 359, US 49 201 09, EP 0065835A1, EP 0142146A2, GB 15 86 152, US 33 75 475, GB 21 62 179A, EP 164698A, WO 8402903, WO 8401231, WO 8603488A US 46 81 893, US 46 45 858, US 52 36 946, US 55 06 262, US 50 25 017, US 48 47 271, US 46 22 338, US 49 04 646, US 48 73 345, US 55 93 971, US 52 60 305, US 52 02 327, US 49 40 727, US 52 72 166, US 53 85 932, US 54 61 039, US 55 56

990, US 55 61 143, US 55 63 128), inhibitors of squalene synthetase, in particular pyrophosphates, pyrophosphate derivatives, bisphosphonic acid derivatives, phosphinylmethylphosphonic acid derivatives, phosphinylformyl derivatives, phosphonocarboxyl derivatives, phosphonosulfonic acid derivatives, phosphinylmethylphosphonic acid derivatives, which partly are known as pharmaceutical and cosmetic preparations for controlling the calcium and phosphate metabolism (DE 25 34 390, DE 25 34 391, DE 33 34 211, DE 34 34 667, DE 27 45 083, US 53 12 814, US 52 54 544, US 54 70 845, US 50 25 003, US 55 34 532, US 48 71 721, WO 92 15 579, US 51 35 935, WO 92 12 160, WO 92 12 159, WO 92 12 158, WO 92 12 157, WO 92 12 156, US 52 73 969, US 53 95 846, US 54 41 946, US 54 51 596, US 54 55 260, US 55 63 128, US 52 02 327, US 49 04 646), and other inhibitors of the synthesis of cholesterol (US 56 61 145, US 57 44 467) are used which assignment is not clarified. HMG-CoA reductase inhibitors competitively inhibit the rate of controlling enzyme of the synthesis of cholesterol, HMG-CoA reductase. Their enzyme affinity is up to 20000-times higher than that of substrate HMG-CoA. The HMG-CoA reductase results in transformation of HMG-CoA to mevalonate, from which besides cholesterol inter alia isopentenyl adenine as well as farnesyl pyrophosphate, the preliminary stage of dolichol and ubiquinone, originate. In bacteria, fungi and parasites which have a HMG-CoA reductase isopentenyl diphosphates are generated upon the acetate/mevalonate pathway, which is inhibited by HMG-CoA reductase inhibitors.

The first discovered inhibitors have been isolated from a penicillium (mevastatin) and an aspergillus fungi (lovastatin). The modification of the side chain led to simvastatin, the advancement of mevastatin to pravastatin. Meanwhile also a completely synthetic enzyme inhibitor (fluvastatin) is available representing a mevalonic lactone derivative of a fluorophenyl substituted indole ring.

In the past attempts for use of these substances in the control of infectious diseases have been made. In particular attempts have been made to inhibit the growth of plants, fungi, parasites, bacteria and viruses by the use of HMG-CoA inhibitors. The HMG-CoA synthetase and HMG-CoA reductase inhibitors inhibit the acetate/mevalonate pathway in some bacteria, fungi (US 50 26 554, US 50 64 856, US 49 20 111, US 49 20 113) and parasites. However many bacteria, for example *Escherichia coli*, do not show inhibition by HMG-CoA reductase inhibitors. Probably the reason is that these bacteria have an alternative metabolic pathway. In *Escherichia coli* indeed the absence of the acetate/mevalonate metabolic pathway and the presence of another metabolic pathway has been proved (Rohmer M. et al., *Biochem.J.* 295, S.517( 1993); Lois E.M. et al., *Proc. Natl. Acad. Sci. USA* 95, S.2105 (1998)).

For parasites up to now no alternative metabolic pathway has been known. The applicant of the present invention succeeded in proving an alternative metabolic pathway, the so-called 1-

deoxyxylulose-5-phosphate or 2-C-methylerythrose-4-phosphate pathway for parasites. Studies of HMG-CoA-reductase inhibitors in parasites resulted in different results in dependence on the parasites. For example pathogens of schistosomiasis are not killed by high doses of lovastatin, while pathogens of malaria are killed in vitro, but not in vivo. Also the pathogens of sleeping sickness are not fully inhibited by inhibitors of HMG-CoA reductase. Similar attempts in inhibiting the increase of viruses show that cells infected by viruses lose the inhibiting influence of the HMG-CoA reductase inhibitors.

Also squalene synthetase inhibitors, such as the aminobisphosphonate, have been examined without success as inhibitors of the amoebic dysentery. A low efficiency of killing has been shown. Similar experiments with toxoplasma also show no satisfying results. Further also inhibitors of squalene monooxygenase have been developed as fungicides (US 47 82 059).

It is therefore an object of the present invention to provide agents, which may be used against infectious processes in humans, animals and plants and as herbicides and against which the built-up of resistance in plants, viruses, fungi, parasites and bacteria is significantly reduced.

Surprisingly, it has been found that the combination of anti-infectiously active compounds, which inhibit the 2-C-methylerythrose-4 metabolic pathway, and inhibitors of the lipid synthesis, in particular the synthesis of cholesterol, in particular of inhibitors of HMG-CoA reductase, and the squalene synthetase increase the scope and the effectiveness of therapy and prophylactics of infections. Surprisingly, the combination kills microorganism, which are killed neither by the first nor by the second group. Surprisingly the combinations show a significant reduction of build-up of resistance against the used compounds, which is generally the major problem in handling the compound group of lipid metabolism inhibitors.

Lipid metabolism inhibitors of anti-infectiously active compounds, which inhibit the 2-C-methylerythrose-4 metabolic pathway, and inhibitors of the lipid metabolism are suited for the therapeutic and prophylactic treatment of infections in plants, in particular in humans and animals, in particular of infections, which are caused by parasites, bacteria, fungi and viruses, and as herbicides in plants.

Lipid metabolism inhibitors according to the invention contain at least one anti-infectiously active compound, which inhibits the 2-C-methylerythrose-4 metabolic pathway and/or their esters and/or their salts. Generally, pharmaceutically acceptable salts, esters, salts of esters or compounds which upon application provide compounds according to the invention as metabolic products or decomposition products, also called "prodrugs", are included.

In the following some groups of substances are described by example which show excellent

success in therapy and prophylactic treatment of infections in combination with lipid metabolism inhibitors.

The groups of anti-infectiously active substances may be determined by a method, in which the proteins being part of the 2-C-methylerythrose-4 metabolic pathway or their derivatives are contacted with the active agents to be examined, and the active agents inhibiting the proteins or derivatives are selected. The method is known by a person skilled in the art.

### **I. Combined preparations of lipid metabolism inhibitors and aminohydrocarbyl phosphonic acid derivatives**

The aminohydrocarbyl phosphonic acid derivatives as well as their preparation have been described in DE-A1-2733658 and the PCT/EP99/02462 in detail.

The aminohydrocarbyl phosphonic acid derivatives correspond to the general formula (I):

in which  $\text{R}_{\text{I1}}$  and  $\text{R}_{\text{I2}}$  may be the same or different and are selected from the group which consists of H, OH, substituted and unsubstituted acyl, substituted and unsubstituted alkyl, substituted and unsubstituted aryl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, and substituted and unsubstituted heterocyclic radicals,

$\text{R}_{\text{I3}}$  and  $\text{R}_{\text{I4}}$  are selected from the group which consists of substituted and unsubstituted alkyl with 1 to 26 carbon atoms, substituted and unsubstituted hydroxyalkyl with 1 to 26 carbon atoms, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted aralkyl, substituted and unsubstituted alkenyl with 1 to 26 carbon atoms, substituted and unsubstituted alkynyl with 1 to 26 carbon atoms, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radicals, halogen,  $\text{X}_{\text{I3}}$  and  $\text{X}_{\text{I4}}$ ,

$\text{X}_{\text{I3}}$  and  $\text{X}_{\text{I4}}$  may be the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl with 1 to 26 carbon atoms, substituted and unsubstituted hydroxyalkyl with 1 to 26 carbon atoms, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted alkenyl with 1 to 26 carbon atoms, substituted and unsubstituted alkynyl with 1 to 26 carbon atoms, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, a silyl, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids, and

A<sub>I</sub> is an alkylene radical, alkenylene radical or hydroxy alkylene radical or corresponds to the following formula (IA):

wherein one or more carbon atoms, selected from the group C<sub>I3</sub>, C<sub>I4</sub>, C<sub>I5</sub>, together with their substituents may also be absent, and at least one present substitute of B<sub>I1</sub> to B<sub>I10</sub> is a C<sub>3-8</sub>-cycloalkyl-(C<sub>0-9</sub>)-alkyl group, wherein the C<sub>3-8</sub>-cycloalkyl group as well as the C<sub>0-9</sub>-alkyl group may comprise one or more double bonds and one or two carbon atoms of the cycloalkyl group may be replaced by nitrogen, oxygen or sulfur atoms, and wherein the cycloalkyl group as well as the alkyl group may be substituted with hydroxy, halogen, amino, oxo groups with branched or straight C<sub>1-9</sub>-alkyl groups and C<sub>2-9</sub>-alkenyl groups, wherein the C<sub>1-9</sub>-alkyl groups and C<sub>2-9</sub>-alkenyl groups may be substituted with hydrogen, hydroxy, amino, halogen and oxo groups, and the remaining present substituents B<sub>I1</sub> to B<sub>I10</sub> are selected from the group which consists of hydrogen, hydroxy, halogen, amino groups, C<sub>1-26</sub>-alkyl radicals, C<sub>1-26</sub>-alkoxy radicals, C<sub>1-26</sub>-alkoxy-C<sub>1-26</sub>-alkyl radicals or both substituents of one C-atom together form an oxo group, wherein each C<sub>1-26</sub>-alkyl radical and each C<sub>1-26</sub>-alkoxy radical may be branched or straight and saturated or unsaturated with one or more double bonds and may be substituted with hydroxy, amino, halogen and oxo groups.

According to the invention the inhibitor of lipid metabolism is not an aminohydrocarbyl phosphonic acid derivative of the formula (I) if an aminohydrocarbyl phosphonic acid derivative is used as the anti-infectiously compound.

The invention also comprises the pharmaceutically acceptable salts, esters and salts of esters.

Preferably R<sub>I1</sub> is OX<sub>I1</sub>, R<sub>I3</sub> is OX<sub>I3</sub>, and R<sub>I4</sub> is OX<sub>I4</sub>, wherein X<sub>I1</sub> is selected from the group which consists of hydrogen, substituted or unsubstituted acyl, substituted or unsubstituted alkyl, substituted or unsubstituted aryl, substituted or unsubstituted aralkyl, substituted or unsubstituted cycloalkyl or substituted or unsubstituted heterocyclic radical and R<sub>I2</sub>, X<sub>I3</sub>, X<sub>I4</sub> and A<sub>I</sub> contain the same meaning as in formula (I).

Preferably the carbon chain of A<sub>I</sub> consists of three carbon atoms.

Compounds in which the carbon chain of A<sub>I</sub> of formula (IA) consists of four carbon atoms C<sub>I1</sub>, C<sub>I2</sub>, C<sub>I3</sub>, C<sub>I4</sub> and B<sub>I7</sub> or B<sub>I8</sub> or both are hydroxy groups are also preferred. In this case methylene groups are also preferred for R<sub>I3</sub> and R<sub>I4</sub>.

Preferably B<sub>11</sub> and B<sub>12</sub> together form furthermore an oxo group. In this case the carbon chain in A<sub>I</sub> consists of the four carbon atoms C<sub>11</sub>, C<sub>12</sub>, C<sub>13</sub>, C<sub>14</sub>.

Preferably, B<sub>17</sub> and B<sub>18</sub> together form furthermore an oxo group. In this case the carbon chain in A also consists of four carbon atoms C<sub>11</sub>, C<sub>12</sub>, C<sub>13</sub>, C<sub>14</sub>.

The carbon chain preferably consists of 5 carbon atoms C<sub>11</sub>, C<sub>12</sub>, C<sub>13</sub>, C<sub>14</sub>, C<sub>15</sub>, wherein B<sub>11</sub> and B<sub>12</sub> together form an oxo group and at least one substituent of B<sub>19</sub> or B<sub>110</sub> is a hydroxy group or B<sub>19</sub> and B<sub>110</sub> together also form an oxo group.

Also substances are suitable, in which a phosphonic acid or phosphinic acid or phosphinoyl group is replaced by a sulfonic group or sulfonyl group:

## II. Combined preparations of lipid metabolism inhibitor and bisphosphonic acid derivatives

The bisphosphonic acids and their derivatives are described in detail in the simultaneously filed parallel International Patent application of the same applicant.

As bisphosphonic acids and their derivatives such of the general formula

are used, wherein

X<sub>II1</sub>, X<sub>II2</sub>, X<sub>II3</sub>, X<sub>II4</sub> being the same or different are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, metals of the 1., 2. and 3. main group of the periodic systems, such as Na, K, Ca, Mg, Al as well as substituted and unsubstituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids,

A<sub>II</sub>, which also may be absent, is selected from the group which consists of alkylene, alkenylene and hydroxyalkylene,

R<sub>II1</sub>, R<sub>II2</sub>, being the same or different, are selected from the group which consists of H, OH, -

NH<sub>2</sub>, substituted and unsubstituted acyl, substituted and unsubstituted alkyl, substituted and unsubstituted aryl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical and -SR<sub>II3</sub>, Cl and -NR<sub>II3</sub>R<sub>II4</sub>, wherein

R<sub>II3</sub>, R<sub>II4</sub> being the same or different are selected from the group which consists of H, OH, substituted and unsubstituted acyl, substituted and unsubstituted alkyl, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted cycloalkyl and substituted and unsubstituted heterocyclic radicals, and their pharmaceutically acceptable salts, esters as well as salts of esters or compounds, which upon application provide the compounds to be administered as metabolic products or decomposition products.

Bisphosphonic acid derivatives of the formula II are particularly preferred in which X<sub>II1</sub>, X<sub>II2</sub>, X<sub>II3</sub>, X<sub>II4</sub> being the same or different are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, the metals of the 1., 2., or 3. main group of the periodic systems, such as Na, K, substituted and unsubstituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids,

A<sub>II</sub> which also may be absent is selected from the group which consists of alkyl, (CH<sub>2</sub>)<sub>0-6</sub>, in particular (CH<sub>2</sub>)<sub>1-5</sub> and amidino,

R<sub>II1</sub> is selected from the group which consists of H, OH, NH<sub>2</sub>, -CH<sub>3</sub>, and

R<sub>II2</sub> is selected from the group which consists of -NH<sub>2</sub>,

Bisphosphonates are particularly preferred, which are selected from the group which consists of amino hydroxy-methylidene-bisphosphonic acid, 2-amino-1-hydroxyethylidene-1,1-bisphosphonic acid, 3-amino-1-hydroxypropylidene-1,1-bisphosphonic acid, 4-amino-1-hydroxybutylidene-1,1-bisphosphonic acid, 6-amino-1-hydroxyhexylidene-1,1-bisphosphonic acid, amidino methylene bisphosphonic acid, 3-methylpentylamino-1-hydroxypropylidene-1,1-bisphosphonic acid, 2-(3-pyridinyl)-1-hydroxyethylidene-bisphosphonic acid, 1-hydroxy-2-(imidazole-1-yl)-ethylidene-1,1-bisphosphonic acid, cycloheptyl aminomethylene diphosphonic acid, 4-chlorophenyl-thiomethylene-1,1-bisphosphonic acid as well as their derivatives.

If the anti-infectiously active compound is a bisphosphonic acid derivative, the lipid metabolism inhibitor is no bisphosphonic acid derivative.

### III. Combined preparations of lipid metabolism inhibitor with organophosphorus compounds comprising a keto group

These compounds are described in detail in the German Patent specification DE-A-198 31 637.2.

These compounds according to the invention correspond to the general formula (III):

in which

$\text{R}_{\text{III1}}$  is selected from the group which consists of H, substituted and unsubstituted acyl, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radicals, halogen and  $\text{OX}_{\text{III1}}$ ,

wherein  $\text{X}_{\text{III1}}$  is selected from the group which consists of hydrogen, substituted and unsubstituted acyl, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, a silyl, substituted and unsubstituted heterocyclic radicals, a cation of an organic and an inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds,

$\text{R}_{\text{III4}}$  and  $\text{R}_{\text{III3}}$  may be the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted acyl, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical, halogen and  $\text{OX}_{\text{III4}}$  and  $\text{OX}_{\text{III3}}$ ,

wherein  $\text{X}_{\text{III4}}$  and  $\text{X}_{\text{III3}}$  are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted cycloalkyl, a silyl, substituted and unsubstituted heterocyclic radical, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium

00720380-122000

compounds which derive from ethylene diamine or amino acids, and  $A_{III1}$  and  $A_{III2}$ , of which one or both may be absent are the same or different and represent an alkylene radical, alkenylene radical, an oxo radical, a hydroxy radical or oxo hydroxyalkylene radical, wherein  $A_{III2}$  is preferably absent.

The invention comprises as well the pharmaceutically acceptable salts, amides, esters and salts of esters.

The phosphonic acid derivatives of the present invention prove to be especially suited. In this case  $R_{III4}$  is  $OX_{III4}$  and  $R_{III3}$  is  $OX_{III3}$ , wherein  $R_{III1}$ ,  $X_{III4}$ ,  $X_{III3}$ ,  $A_{III1}$  and  $A_{III2}$  contain the same meaning as in formula (III).

Particularly preferred phosphonic acid derivatives are chloroacetyl phosphonic acid (fosfenchlorin), phosphonoformic acid (foscarnet), phosphonoacetic acid, N,N-dimethyl-(1-hydroxy-2-oxo-2-methoxy-ethyl)-phosphonamide and 2-hydroxy-2-hydroxymethyl-3-oxo-butylphosphonic acid (phosphonothrixine) and ammonium-ethylcarbamoyl phosphonate (fosamine ammonium).

#### IV. Combined preparations of lipid metabolism inhibitor and organophosphorus compounds which contain at least one ether group or one keto group

These compounds according to the invention correspond to the general formula (IV):

in which  $R_{IV1}$  and  $R_{IV2}$  being the same or different are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical, halogen,  $OX_{IV1}$  and  $OX_{IV2}$ ,

wherein  $X_{IV1}$  and  $X_{IV2}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radicals,

B<sub>IV</sub> is selected from the group which consists of ether group (IVA)

wherein A<sub>IV1</sub> and A<sub>IV2</sub> of which A<sub>IV2</sub> also may be absent are the same or different and are selected from the group which consists of alkylene radical, alkenylene radical and hydroxyalkylene radical,

keto group (IVB)

wherein A<sub>IV3</sub> and A<sub>IV4</sub>, of which one or also both may be absent, are the same or different, are selected from the group which consists of alkylene radical, Alkenylene radical and hydroxyalkylene radical,

and 5 and 6 membered cyclic, in particular heterocyclic compounds, which contain additionally to carbon at least one heteroatom as a ring member, wherein the heteroatom is selected from the group which consists of oxygen and nitrogen,

R<sub>IV3</sub> and R<sub>IV4</sub> being the same or different are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl having up to 26 carbon atoms, substituted and unsubstituted hydroxyalkyl having up to 26 carbon atoms, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted aralkyl, substituted and unsubstituted alkenyl having up to 26 carbon atoms, substituted and unsubstituted alkynyl having up to 26 carbon atoms, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, halogen, OX<sub>IV3</sub> or OX<sub>IV4</sub>,

wherein X<sub>IV3</sub> or X<sub>IV4</sub> are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl having up to 26 carbon atoms, substituted and unsubstituted hydroxyalkyl having up to 26 carbon atoms, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted alkenyl having up to 26 carbon atoms, substituted and unsubstituted alkynyl having up to 26 carbon atoms, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radicals, a silyl, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids, and their pharmaceutically acceptable salts, esters and amides and salts of esters.

In particular compounds are preferred which correspond to the formula (IVC)

wherein

$\text{R}_{\text{IV}2}$  is selected from the group which consists of acetyl and formyl,

$\text{A}_{\text{IV}1}$  is selected from the group which consists of methylene, ethylene, ethenylene, hydroxyethylene, 2-hydroxypropylene, and

$\text{X}_{\text{IV}3}$  and  $\text{X}_{\text{IV}4}$  are the same or different and are selected from the group which consists of sodium, potassium, methyl, ethyl.

Preferably the chain  $-\text{A}_{\text{IV}1}-\text{O}-\text{C}(\text{ZY})-$  consists of one oxygen atom and two or three carbon atoms (substituents are not taken into consideration), particularly preferred two carbon atoms.

Out of the ether compounds the compounds are particularly preferred which are selected from the group which consists of ((N-formyl-N-hydroxyamino)-methoxy)-methylphosphonic acid disodium salt, ((N-acetyl-N-hydroxyamino)-methoxy)-methylphosphonic acid disodium salt, (2-(N-formyl-N-hydroxyamino)-ethenoxy)-methylphosphonic acid disodium salt, (2-(N-acetyl-N-hydroxyamino)-ethenoxy)-methylphosphonic acid disodium salt, (3-(N-formyl-N-hydroxyamino)-2-hydroxypropoxy)-methylphosphonic acid disodium salt, (3-(N-acetyl-N-hydroxyamino)-2-hydroxypropoxy)-methylphosphonic acid disodium salt.

Further those compounds are preferred, which correspond to the formula (IVD)

wherein  $\text{R}_{\text{IV}2}$  is selected from the group which consists of acetyl and formyl,  $\text{A}_{\text{IV}3}$  is selected from the group which consists of methylene, ethylene, ethenylene, hydroxymethylene, hydroxyethylene and 2-hydroxypropylene,  $\text{A}_{\text{IV}4}$  is absent or is methylene, and  $\text{X}_{\text{IV}3}$  and  $\text{X}_{\text{IV}4}$  are the same or different and are selected from the group which consists of a metal of the first, second or third main group of the periodic system, in particular sodium, potassium, and methyl, ethyl.

Preferably the chain  $-\text{A}_{\text{IV}1}-\text{CO}-\text{A}_{\text{IV}2}-$  consists of two to four carbon atoms (substituents are not taken into consideration), particularly preferred of three carbon atoms.

Out of these compounds 2-(N-formyl-N-hydroxyamino)-1-oxoethylphosphonic acid disodium salt, 2-(N-acetyl-N-hydroxyamino)-1-oxoethylphosphonic acid disodium salt, 3-(N-formyl-N-hydroxy amino)-1-oxopropylphosphonic acid disodium salt, 3-(N-acetyl-N-hydroxy amino)-1-oxopropylphosphonic acid disodium salt, 3-(N-formyl-N-hydroxyamino)-1-oxo-2-propenyl-phosphonic acid disodium salt, 3-(N-acetyl-N-hydroxyamino)-1-oxo-2-propenylphosphonic acid disodium salt, 4-(N-formyl-N-hydroxyamino)-1-oxo-3-hydroxybutylphosphonic acid disodium salt, 4-(N-acetyl-N-hydroxyamino)-1-oxo-3-hydroxybutyl-phosphonic acid disodium salt, 3-(N-formyl-N-hydroxyamino)-2-oxopropylphosphonic acid disodium salt, 3-(N-acetyl-N-hydroxyamino)-2-oxopropylphosphonic acid disodium salt, 4-(N-formyl-N-hydroxyamino)-3-oxo-2-hydroxy-2-methylbutylphosphonic acid disodium salt, 4-(N-acetyl-N-hydroxyamino)-3-oxo-2-hydroxy-2-methylpropylphosphonic acid disodium salt, 4-(N-formyl-N-hydroxyamino)-3-oxo-2-hydroxy-2-(hydroxymethyl)-butyl-phosphonic acid disodium salt, 4-(N-acetyl-N-hydroxyamino)-3-oxo-2-hydroxy-2-(hydroxymethyl)-propylphosphonic acid disodium salt are particularly preferred.

In the cyclic compounds the amino group and the phosphorus atom may be bound to any C-atoms of the ring. However, compounds are preferred, in which they are bound to two C-atoms, which are separated only by one additional atom. In the heterocyclic compounds both carbon atoms preferably are separated by one heteroatom.

The following compounds are particularly preferred:

Additionally, substances are suitable in which the phosphonic acid or phosphinic acid or phosphinoyl group is replaced by a sulfonic group or sulfonyl group:

## V. Combined preparations of lipid metabolism inhibitor and organophosphorus compounds which contain at least one hydroxy group

The phosphonic acid derivatives according to the invention correspond to the general formula (V):

wherein  $\text{A}_{V1}$  and  $\text{A}_{V2}$ , out of which one or also both may be absent, are the same or different and are selected from the group which consists of an alkylene radical, contain an alkenylene radical and a hydroxyalkylene radical, and preferably the carbon chain  $-\text{A}_{V1}-\text{CHOH}-\text{A}_{V2}-$  consists of 2 to 5 carbon atoms, particularly preferred of 3-4 carbon atoms,  $\text{B}_V$  is selected from the group which consists of a radical of formula (VA)

wherein  $\text{R}_{V1}$  is selected from the group which consists of hydrogen, OH, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radicals and halogen, of a radical of the formula (VB)

Additionally, substances are suitable in which the phosphonic acid or phosphinic acid or phosphinoyl group is replaced by a sulfonic group or sulfonyl group:

# **V. Combined preparations of lipid metabolism inhibitor and organophosphorus compounds which contain at least one hydroxy group**

The phosphonic acid derivatives according to the invention correspond to the general formula (V):

wherein  $\text{A}_{V1}$  and  $\text{A}_{V2}$ , out of which one or also both may be absent, are the same or different and are selected from the group which consists of an alkylene radical, contain an alkenylene radical and a hydroxyalkylene radical, and preferably the carbon chain  $-\text{A}_{V1}-\text{CHOH}-\text{A}_{V2}-$  consists of 2 to 5 carbon atoms, particularly preferred of 3-4 carbon atoms,  $\text{B}_V$  is selected from the group which consists of a radical of formula (VA)

wherein  $\text{R}_{V1}$  is selected from the group which consists of hydrogen, OH, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radicals and halogen, of a radical of the formula (VB)

wherein  $R_{V2}$ ,  $R_{V3}$ , and  $R_{V4}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical, halogen, and of a radical of the formula (VC)

wherein  $R_{V5}$ ,  $R_{V6}$  and  $R_{V7}$  are the same or different and are selected from the group which consists of hydrogen, OH, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical, halogen,

wherein  $X_{V3}$  or  $X_{V4}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, a silyl, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids, and their pharmaceutically acceptable salts, esters and amides and salts of esters.

Preferably  $R_{V1}$  in formula (VA) is a methyl group.

Preferably in formula (VB)  $R_{V2}$  and  $R_{V4}$  are hydrogen and  $R_{V3}$  is a methyl group.

Preferably in formula (VC)  $R_{V5}$  is a methyl group,  $R_{V6}$  is selected from the group which consists of H, OH and methyl, and  $R_{V7}$  is a hydroxy group.

Particularly preferred are the compounds which correspond to the formula

wherein

$\text{A}_{\text{V}2}$  is a straight hydroxyalkylene with 1 to 3 carbon atoms and

$\text{X}_{\text{V}3}$  and  $\text{X}_{\text{V}4}$  are the same or different and are selected from the group which consists of hydrogen, a metal of the first, second or third main group of the periodic system, in particular sodium, potassium, and methyl, ethyl.

Out of these compounds 3,4-dihydroxy-5-oxo-hexylphosphonic acid disodium salt, 1,2,3,4-tetrahydroxy-5-oxo-hexylphosphonic acid disodium salt, 2,3,4-trihydroxy-5-oxo-hexylphosphonic acid disodium salt, 1,2,3-trihydroxy-4-oxo-pentylphosphonic acid disodium salt and 2,3-dihydroxy-4-oxopentylphosphonic acid disodium salt are particularly preferred.

In particular additionally compounds are preferred which correspond to the formula

wherein

$\text{A}_{\text{V}2}$  is a straight hydroxyalkylene with 1 to 3 carbon atoms and

$\text{X}_{\text{V}3}$  and  $\text{X}_{\text{V}4}$  are the same or different and are selected from the group which consists of hydrogen, a metal of the first, second or third main group of the periodic system, in particular sodium, potassium, methyl and ethyl.

Out of these compounds 3,4,5-trihydroxy-4-methyl-pentylphosphonic acid disodium salt, 2,3,4,5-tetrahydroxy-4-methyl-pentylphosphonic acid disodium salt, 1,3,4,5-tetra-hydroxy-4-methylpentylphosphonic acid disodium salt, 1,2,3,4,5-pentahydroxy-4-methyl-pentylphosphonic acid disodium salt are particularly preferred.

In particular also those compounds are preferred, which correspond to the formula

wherein  $\text{A}_{\text{V}2}$  is a straight hydroxyalkylene or a straight alkylene and consists of 1 to 3 carbon atoms and

$X_{V3}$  and  $X_{V4}$  are the same or different and are selected from the group which consists of hydrogen, a metal of the first, second or third main group of the periodic system, in particular sodium, potassium, and methyl, ethyl.

Out of these compounds 3,4-dihydroxy-4-methyl-5-oxo-pentylphosphonic acid disodium salt, 2,3,4-trihydroxy-4-methyl-5-oxo-pentylphosphonic acid disodium salt, 1,2,3-tri-hydroxy-4-methyl-5-oxo-pentylphosphonic acid disodium salt, 2-monohydroxy-3-methyl-4-oxo-butylphosphonic acid disodium salt, 1,2-dihydroxy-3-methyl-4-oxo-butylphosphonic acid disodium salt are particularly preferred.

## VI. Combined preparation of lipid metabolism inhibitor and organophosphorus or organosulfur compounds containing an amine or imine group

The organophosphorus compounds according to the invention correspond to the general formula (VI):

wherein  $R_{VI3}$  and  $R_{VI4}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl having up to 26 carbon atoms, substituted and unsubstituted hydroxyalkyl having up to 26 carbon atoms, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted aralkyl, substituted and unsubstituted alkenyl having up to 26 carbon atoms, substituted and unsubstituted alkynyl having up to 26 carbon atoms, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radicals, halogen,  $OX_{VI3}$  or  $OX_{VI4}$ ,

wherein  $X_{VI3}$  or  $X_{VI4}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl having up to 26 carbon atoms, substituted and unsubstituted hydroxyalkyl having up to 26 carbon atoms, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted alkenyl having up to 26 carbon atoms, substituted and unsubstituted alkynyl having up to 26 carbon atoms, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, a silyl, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids,

and  $B_{VI}$  is selected from the group which consists of the group (VIA)

and the group (VIB)

wherein  $A_{VI}$  is selected from the group which consists of an alkyleneamine radical, an alkenyleneamine radical, a hydroxyalkyleneamine radical, an alkyleneimine radical, an alkenyleneimine radical and a hydroxyalkyleneimine radical, wherein the nitrogen atom is a member of the chain which connects the phosphorus atom with the nitrogen atom of the group

in which  $R_{VI1}$  and  $R_{VI2}$  in group (VIA) are the same or different and  $R_{VI1}$  and  $R_{VI2}$  in group (VIA) and  $R_{VI1}$  in group (VIB) are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical, halogen,  $OX_{VI1}$  and  $OX_{VI2}$ ,

wherein  $X_{VI1}$  and  $X_{VI2}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical,

and their pharmaceutically acceptable salts, esters and amides and salts of esters.

Preferably,  $A_{VI}$  is an amino group, in which the nitrogen atom is not in the end position. Preferably,  $A_{VI}$  connects the nitrogen and the phosphorus atom by three atoms (without substituents).

In particular those compounds are preferred, which correspond to the formula (VI)

wherein

$\text{R}_{\text{VI1}}$ ,  $\text{R}_{\text{VI2}}$ ,  $\text{R}_{\text{VI3}}$  and  $\text{X}_{\text{VI4}}$  are defined the same as in formula (VI), and  $\text{A}_{\text{VI}}$  is selected from the group which consists of C-N-C, C=N-C, C-N=C, wherein the carbon atoms may be substituted with a hydroxy or alkyl group having up to 7 carbon atoms.

Particularly preferably  $\text{R}_{\text{VI1}}$  is a hydroxy group,  $\text{R}_{\text{VI2}}$  is selected from the group which consists of acetyl and formyl,  $\text{R}_{\text{VI3}}$  is selected from the group which consists of hydrogen, methyl, ethyl, hexadecyl, octadecyl and  $\text{OX}_{\text{VI3}}$ , and  $\text{X}_{\text{VI3}}$  and  $\text{X}_{\text{VI4}}$  selected from the group which consists of hydrogen, sodium, potassium, methyl, ethyl, hexadecyl and octadecyl, and may be, as far both are present, the same or different.

Further compounds are preferred which correspond to the formula (VID)

wherein

$\text{R}_{\text{VI1}}$ ,  $\text{R}_{\text{VI2}}$ ,  $\text{R}_{\text{VI3}}$  and  $\text{X}_{\text{VI4}}$  are defined the same as in formula (I), and A is selected from the group which consists of C-N-C, C=N-C, C-N=C, wherein the carbon atoms may be substituted with a hydroxy or alkyl group having up to 7 carbon atom.

Particularly preferably  $\text{R}_{\text{VI1}}$  is selected from the group which consists of acetyl and formyl, and  $\text{R}_{\text{VI3}}$  is selected from the group which consists of hydrogen, methyl, ethyl, hexadecyl, octadecyl and  $\text{OX}_{\text{VI3}}$ , and  $\text{X}_{\text{VI3}}$  and  $\text{X}_{\text{VI4}}$  are selected from the group which consists of hydrogen, sodium, potassium, methyl, ethyl, hexadecyl and octadecyl, and may be the same or different as far both are present.

## VII. Combined preparation of lipid metabolism inhibitor with organophosphorus compounds, which contain a nitrogen heterocycle

The organophosphorus compounds used according to the invention correspond to the general formula (VII):

in which  $\text{A}_{\text{VII}}$  is selected from the group which consists of  $(\text{C}_{1-9})$ -alkylene radical, which may comprise one or more double bonds and may be substituted with hydroxy, halogen, amino, oxo groups with branched or straight  $\text{C}_{1-9}$ -alkyl groups and  $\text{C}_{2-9}$ -alkenyl groups, wherein the  $\text{C}_{1-9}$ -alkyl groups and  $\text{C}_{2-9}$ -alkenyl groups may be substituted with hydrogen, hydroxy, amino, halogen and oxo groups,  $-\text{C}-\text{O}-\text{C}-$  and  $-\text{C}-\text{N}-\text{C}-$ , wherein the carbon atoms of  $-\text{C}-\text{O}-\text{C}-$  and  $-\text{C}-\text{N}-\text{C}-$  may be substituted with an alkyl having up to 7 carbon atoms or hydroxy groups, or in which  $\text{A}_{\text{VII}}$  corresponds to the following formula (VIIA):

wherein one or more of the carbon atoms selected from the group  $\text{C}_{\text{VII3}}$ ,  $\text{C}_{\text{VII4}}$ ,  $\text{C}_{\text{VII5}}$  may also be absent together with their substituents, and at least one present substitute of  $\text{B}_{\text{VII1}}$  to  $\text{B}_{\text{VII10}}$  is a  $\text{C}_{3-8}$ -cycloalkyl- $(\text{C}_{0-9})$ -alkyl group, wherein the  $\text{C}_{3-8}$ -cycloalkyl group as well as the  $\text{C}_{0-9}$ -alkyl group may contain one or more double bonds and one or two carbon atoms of the cycloalkyl group may be replaced by nitrogen, oxygen or sulfur atoms, and wherein the cycloalkyl group as well as the alkyl group may be substituted with hydroxy, halogen, amino, oxo groups, with branched or straight  $\text{C}_{1-9}$ -alkyl groups and with  $\text{C}_{2-9}$ -alkenyl groups, wherein the  $\text{C}_{1-9}$ -alkyl groups and  $\text{C}_{2-9}$ -alkenyl groups may be substituted with hydrogen, hydroxy, amino, halogen and oxo groups, and the remaining present substituents  $\text{B}_{\text{VII1}}$  to  $\text{B}_{\text{VII10}}$  are selected from the group which consists of hydrogen, hydroxy, halogen, amino groups,  $\text{C}_{1-26}$ -alkyl radicals,  $\text{C}_{1-26}$ -alkoxy radicals,  $\text{C}_{1-26}$ -alkoxy- $\text{C}_{1-26}$ -alkyl radicals or both substituents of one C-atom together form an oxo group, wherein each  $\text{C}_{1-26}$ -alkyl radical and each  $\text{C}_{1-26}$ -alkoxy radical may be branched or straight and saturated or unsaturated with one or more double bonds and may be substituted with hydroxy, amino, halogen and oxo groups,

in which  $\text{R}_{\text{VII1}}$  is selected from the group which consists of 5 and 6 membered heterocycles with one or two nitrogen, oxygen or sulfur atoms in the ring, wherein the heterocycle may be saturated or unsaturated with one or more double or triple bonds and may be substituted with hydroxy, halogen, amino, oxo groups and by branched or straight  $\text{C}_{1-9}$ -alkyl groups and by  $\text{C}_{2-9}$ -alkenyl groups, wherein the  $\text{C}_{1-9}$ -alkyl groups and  $\text{C}_{2-9}$ -alkenyl groups may be saturated or unsaturated with one or more double or triple bonds and may be substituted with hydrogen, hydroxy, amino, halogen and oxo groups,

in which  $R_{VII3}$  and  $R_{VII4}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted  $C_{1-26}$ -alkyl, hydroxy- $C_{1-26}$ -alkyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted aralkyl, substituted and unsubstituted  $C_{1-26}$ -alkenyl, substituted and unsubstituted  $C_{1-26}$ -alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, halogen,  $OX_{VII3}$  and  $OX_{VII4}$ ,

wherein  $X_{VII3}$  and  $X_{VII4}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted  $C_{1-26}$ -alkyl, substituted and unsubstituted hydroxy- $C_{1-26}$ -alkyl, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted  $C_{1-26}$ -alkenyl, substituted and unsubstituted  $C_{1-26}$ -alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, a silyl, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids, and their pharmaceutically acceptable salts, esters and amides and salts of esters.

If two heteroatoms are present in the heterocycle  $R_{VII1}$ , of course they also may be present in mixed form, for example an oxygen atom and a nitrogen atom.

Preferably  $R_{VII1}$  is a heterocycle containing nitrogen atoms, wherein substituted or unsubstituted pyridine, substituted or unsubstituted pyrimidine, substituted or unsubstituted pyrrole and substituted or unsubstituted pyrazole are particularly preferred and

are especially particularly preferred.

Preferably the organophosphorus compound corresponds to the formula (VIIC)

wherein  $R_{VII3}$  preferably is hydrogen, methyl, ethyl or an amide radical and  $X_{VII4}$  is selected from the group which consists of hydrogen, sodium, potassium, methyl, ethyl,

and particularly preferably correspond to the formula (VIID)

Additionally, substances are suitable in which the phosphonic acid or phosphinic acid or phosphinoyl group is replaced by sulfonic group or sulfonyl group:

### VIII. Combined preparation of lipid metabolism inhibitor and phosphonoformic acid derivatives

The compounds are described in WO 98/16537.

The organophosphorus compounds used according to the present invention correspond to the general formula (VIII):

wherein the wavy line represents a bond which has either  $\alpha$ - or  $\beta$ -configuration,  
n is 0 or 1,

wherein  $\text{R}_{\text{VIII}1}$  is selected from the group which consists of substituted and unsubstituted  $\text{C}_{1-26}$ -alkyl, hydroxy- $\text{C}_{1-26}$ -alkyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted aralkyl, substituted and unsubstituted  $\text{C}_{1-26}$ -alkenyl, substituted and unsubstituted  $\text{C}_{1-26}$ -alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radicals, halogen and  $\text{OX}_{\text{VIII}1}$ ,

wherein  $\text{X}_{\text{VIII}1}$  is selected from the group which consists of hydrogen, substituted and unsubstituted  $\text{C}_{1-26}$ -alkyl, substituted and unsubstituted hydroxy- $\text{C}_{1-26}$ -alkyl, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted  $\text{C}_{1-26}$ -alkenyl,

substituted and unsubstituted  $C_{1-26}$ -alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, a silyl, a cation of organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids,

$R_{VIII}$  is selected from the group which consists of  $C_{1-24}$ -alkyl radicals,

$C_{2-24}$ -alkenyl radicals,  $C_{2-24}$ -alkapolyenyl radicals, which contain 2 to 6 double bonds,  $C_{2-24}$ -alkynyl radicals,  $C_{3-8}$ -cycloalkyl radicals,  $C_{3-8}$ -cycloalkyl- $C_{1-24}$ -alkyl radicals and  $C_{1-12}$ -alkoxy- $C_{1-12}$ -alkyl radicals,

$R_{VIII2}$ ,  $R_{VIII3}$  and  $R_{VIII4}$  each are selected independently from the group which consists of hydrogen, halogen, amino, acetylamino, azido and  $XR_{VIII6}$ -groups, wherein X is O or S and

$R_{VIII6}$  is selected from the group which consists of a hydrogen radical, branched or straight  $C_{1-4}$ -alkyl radicals and  $C_{2-4}$ -alkenyl radicals, wherein the  $C_{1-4}$ -alkyl radicals as well as the  $C_{2-4}$ -alkenyl radicals optionally may be substituted with hydrogen, amino, halogen or oxo groups, or

$R_{VIII2}$ ,  $R_{VIII3}$  and  $R_{VIII4}$  together with the respective geminal hydrogen group represent an oxo group,

$R_{VIII5}$  is selected from the group which consists of hydrogen,  $C_{1-24}$ -alkyl groups,  $C_{3-8}$ -cycloalkyl radicals,  $ar(C_{1-24}-alkyl)$  groups, aryl groups, acyl groups, heterocyclic radicals, halogen, wherein all radicals may be branched or straight and optionally may be substituted with hydroxy, amino, halogen or oxo groups and may contain 2-6 double and triple bonds or  $R_{VIII5}$  is a phenyl radical of the formula VIIIA or VIIIB,

(VIIIA)

(VIIIB)

wherein  $R_{VIII7}$  and  $R_{VIII8}$  are the same or different and are bound to any two positions of the phenyl ring and are selected independently from the group which consists of hydrogen, halo-

gen, C<sub>1-4</sub>-alkyl radicals, C<sub>1-4</sub>-alkoxy radicals, formyl, acetyl, propionyl, butyryl radicals, formyl, acetyl, propionyl, butyryloxy radicals, C<sub>2-5</sub>-alkoxycarbonyl radicals, which all may be branched or straight, or R<sub>7</sub> and R<sub>VIII8</sub> may form together a straight saturated alkylene chain having 3 to 4 carbon atoms bound to adjacent positions, for example the 2,3-position or 3,4-position of the phenyl ring, or R<sub>7</sub> and R<sub>8</sub> together form a methylenedioxy radical, a 1,1-ethylidenedioxy radical or a 1,2-ethylenedioxy radical, which are bound to the 2,3- or 3,4-positions of the phenyl ring, or

R<sub>VIII5</sub> is selected from the group which consists of R<sub>VIII9</sub>COOCHR<sub>VIII10</sub>- and R<sub>VIII9</sub>OCOCHR<sub>VIII10</sub>-,

wherein R<sub>VIII9</sub> is selected from the group which consists of C<sub>1-6</sub>-alkyl radicals, C<sub>2-6</sub>-alkenyl radicals, C<sub>2-6</sub>-alkynyl radicals, C<sub>3-8</sub>-cycloalkyl radicals, C<sub>3-8</sub>-cycloalkyl-C<sub>1-6</sub>-alkyl radicals and C<sub>1-6</sub>-alkoxy-C<sub>1-6</sub>-alkyl radicals, wherein all radicals may be branched or straight and optionally may be substituted with hydroxy, amino, halogen or oxo groups, and

R<sub>10</sub> is a branched or straight C<sub>1-4</sub>-alkyl radical,

and wherein the configurations of the substituents R<sub>VIII2</sub>, R<sub>VIII3</sub>, R<sub>VIII4</sub> and

R<sub>VIII5</sub>OOCPO(OH)OCH<sub>2</sub>- in (VIII) are selected independently from D-glucosyl, L-glucosyl, D-galactosyl, L-galactosyl, D-mannosyl, L-mannosyl, D-talosyl, L-talosyl, D-allosyl, L-allosyl, D-altrosyl, L-altrosyl, D-gulosyl, L-gulosyl, D-idosyl or L-idosyl, if n is 1 or the configurations of the substituents R<sub>2</sub>, R<sub>3</sub> and R<sub>5</sub>OOCPO(OH)OCH<sub>2</sub>- in I are independent D-ribosyl, L-ribosyl, D-arabinosyl, L-arabinosyl, D-xylosyl, L-xylosyl, D-lyxosyl or L-lyxosyl, if n is 0.

According to the invention the configuration of the glycosidic bond of the compounds is preferably  $\alpha$ .

Preferred compounds of formula (VIII) are those, wherein R<sub>VIII1</sub> is selected from the group which consists of C<sub>9-24</sub>-alkyl radicals, C<sub>9-24</sub>-alkenyl radicals, C<sub>9-24</sub>-alkapolyenyl radicals, which contain 2 to 6 double bonds, C<sub>9-24</sub>-alkynyl radicals, C<sub>3-8</sub>-cycloalkyl-C<sub>6-24</sub>-alkyl radicals and C<sub>1-12</sub>-alkoxy-C<sub>8-12</sub>-alkyl radicals, which each may optionally be branched or straight and may be substituted with hydrogen, amino, halogen or oxo radicals.

In particular the use of any compound is preferred, in which R<sub>VIII1</sub> is selected from the group which consists of a *n*-tetradecyl radical, *n*-octadecyl-1-yl radical, a *trans*-9-octadecenyl radical and a *cis*-9-octadecen-1-yl radical. Preferably R<sub>VIII2</sub>, R<sub>VIII3</sub>, R<sub>VIII4</sub> each are hydroxy groups. Preferably R<sub>VIII5</sub> is a hydrogen, a formyl group or an acetyl group. Furthermore n is preferably 1 and the configuration of the substituents R<sub>VIII2</sub>, R<sub>VIII3</sub>, R<sub>VIII4</sub>, and R<sub>VIII5</sub>OOCPO(OH)OCH<sub>2</sub>- is D-glucosyl.

Preferably R<sub>VIII11</sub> represents OX<sub>VIII11</sub> with X<sub>VIII11</sub> = hydrogen.

# IX. Combined preparation of lipid metabolism inhibitor and heterocyclic phosphonoformic acid derivatives

The organophosphorus compounds according to the invention are described in WO98/16537 and correspond to the formula (IX)

wherein  $R_{IX11}$  is selected from the group which consists of substituted and unsubstituted  $C_{1-26}$ -alkyl, hydroxy- $C_{1-26}$ -alkyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted aralkyl, substituted and unsubstituted  $C_{1-26}$ -alkenyl, substituted and unsubstituted  $C_{1-26}$ -alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, halogen and  $OX_{IX11}$ ,

wherein  $X_{IX11}$  is selected from the group which consists of hydrogen, substituted and unsubstituted  $C_{1-26}$ -alkyl, substituted and unsubstituted hydroxy- $C_{1-26}$ -alkyl, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted  $C_{1-26}$ -alkenyl, substituted and unsubstituted  $C_{1-26}$ -alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, a silyl, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids,

wherein  $R_{IX1}$  and  $R_{IX2}$  each are selected independently from the group which consists of  $C_{1-24}$ -alkyl radicals,  $C_{3-8}$ -cycloalkyl radicals,  $C_{3-8}$ -cycloalkyl- $C_{1-24}$ -alkyl radicals,  $C_{1-24}$ -alkoxy radicals,  $C_{1-24}$ -alkylthio radicals,  $C_{1-24}$ -alkoxy- $C_{1-24}$ -alkyl radicals and  $C_{1-24}$ -alkylthio- $C_{1-24}$ -alkyl radicals, acyl radicals, aryl radicals, aralkyl radicals, heterocyclic radicals, halogen and hydrogen, and each  $C_{1-24}$ -alkyl radical and  $C_{1-24}$ -alkoxy radical may be branched or straight and may be saturated or unsaturated with 2 to 6 double bonds and optionally may be substituted with hydroxy, amino, mercapto, halogen, oxo groups or  $C_{1-24}$ -alkoxy radicals,  $C_{1-24}$ -alkylcarbonyl-oxy radicals,  $C_{1-24}$ -alkoxycarbonyloxy radicals,  $C_{1-24}$ -alkylthio radicals,  $C_{1-24}$ -alkylcarbonyl-thio radicals,  $C_{1-24}$ -alkylamino radicals, di- $(C_{1-24}$ -alkyl)amino radicals,  $C_{1-24}$ -alkylcarbonyl-amino radicals,  $C_{1-24}$ -alkyl- $(C_{1-24}$ -alkylcarbonyl)amino radicals,  $C_{1-24}$ -alkoxycarbonylamino radicals or  $C_{1-24}$ -alkyl- $(C_{1-24}$ -alkoxycarbonyl)amino radicals, wherein each aralkyl radical, heterocyclic radical,  $C_{1-24}$ -alkyl radical and  $C_{1-24}$ -alkoxy radical may be

branched or straight and may be saturated or unsaturated with 2 to 6 double bonds or triple bonds, or

wherein  $R_{IX1}-CH-CH-R_{IX2}$  form part of a  $C_{4-8}$ -carbon ring, which optionally may be substituted with hydroxy, mercapto, amino, halogen, oxo groups or with  $C_{1-24}$ -alkyl radicals,  $C_{1-24}$ -alkoxy radicals,  $C_{1-24}$ -alkylthio radicals,  $C_{1-24}$ -alkylamino radicals, di- $(C_{1-24}$ -alkyl)amino-radicals,  $C_{1-24}$ -alkylcarbonyl radicals,  $C_{1-24}$ -alkylcarbonyloxy radicals,  $C_{1-24}$ -alkoxycarbonyl radicals,  $C_{1-24}$ -alkylcarbonylthio radicals or  $C_{1-24}$ -alkylcarbonylamino radicals,  $C_{1-24}$ -alkyl- $(C_{1-24}$ -alkylcarbonyl)-amino radicals, all  $C_{1-24}$ -alkyl radical may be branched or straight and saturated or unsaturated with 1 to 6 double bonds, or

wherein  $R_{IX10}$  is a branched or straight  $C_{1-4}$ -alkyl radical, and

wherein  $R_{IX1}-CH-CH-R_{IX2}$  form a part of the furanose or pyranose ring of a sugar, for example D-ribose, D-arabinose, D-xylose, D-lyxose, D-glucose, D-galactose, D-mannose, D-talose, D-allose, D-altrose, D-gulose, D-idose or the corresponding L-isomers, wherein the hydroxy groups each may be optionally substituted with hydrogen, amino, azido, oxo, mercapto radicals or  $C_{1-24}$ -alkoxy radicals,  $C_{1-24}$ -alkylthio radicals,  $C_{1-24}$ -alkylamino radicals, di- $(C_{1-24}$ -alkyl)amino radicals,  $C_{1-24}$ -alkylcarbonyloxy radicals,  $C_{1-24}$ -alkylcarbonylthio radicals,  $C_{1-24}$ -alkylcarbonylamino radicals,  $C_{1-24}$ -alkyl- $(C_{1-24}$ -alkylcarbonyl)amino radicals, wherein each  $C_{1-24}$ -alkyl radical may be branched or straight and saturated or unsaturated with 1 to 6 double bonds, and their pharmaceutically acceptable salts, esters and amides and salts of esters as well as their optical isomers.

In particular  $R_{IX1}$  and  $R_{IX2}$  each may be selected independently from the group which consists of carboxyl radicals, carboxamido radicals, aryl radicals, aryloxycarbonyl radicals, aryl- $C_{1-24}$ -alkyl radicals,  $C_{1-24}$ -alkoxycarbonyloxy radicals,  $C_{1-24}$ -alkylaminocarbonyl radicals, di- $(C_{1-24}$ -alkyl)-aminocarbonyl radicals, aryl- $C_{1-24}$ -alkoxycarbonyl radicals, aryl- $C_{1-24}$ -alkylamino-carbonyl radicals,  $C_{1-24}$ -alkylcarbonyloxy- $(C_{1-4})$ -alkylmethoxycarbonyl radicals,  $C_{1-24}$ -alkoxy-carbonyloxymethoxycarbonyl radicals,  $C_{1-24}$ -alkoxycarbonyl-oxy- $(C_{1-4}$ -alkyl)-methoxycarbonyl, wherein each  $C_{1-24}$ -alkyl radical may be branched or straight and saturated or unsaturated with 2 to 6 double bonds, and each  $C_{1-4}$ -alkyl radical and  $C_{1-24}$ -alkoxy radical may be branched or straight and saturated or unsaturated, and each aryl radical corresponds to the formula IXA

(IXA)

wherein  $R_{IX3}$  and  $R_{IX4}$  are the same or different and each are selected from the group which

consists of hydrogen, halogen, C<sub>1-4</sub>-alkyl radicals, C<sub>1-4</sub>-alkoxy radicals, formyl, acetyl, propionyl, butyryl radicals, formyl, acetyl, propionyl, butyryloxy radicals, C<sub>1-4</sub>-alkoxy carbonyl radicals, which all may be branched or straight, or R<sub>IX3</sub> and R<sub>IX4</sub> together form a straight saturated alkylene chain with 3 to 4 carbon atoms, which is bound to adjacent positions of the phenyl ring, or R<sub>IX3</sub> and R<sub>IX4</sub> together form a methylene dioxy radical, a 1,1-ethylenedioxy radical or a 1,2-ethylenedioxy radical which is bound to adjacent positions of the phenyl ring.

The use of compounds is preferred, in which R<sub>IX1</sub> and R<sub>IX2</sub> each are independently selected from the group which consists of hydrogen, hydroxy groups, formyl, acetyl and methyl, wherein the methyl radical optionally may be substituted with a hydroxy group or mercapto group or with C<sub>1-24</sub>-alkoxy radicals, C<sub>1-24</sub>-alkylcarbonyloxy radicals, C<sub>1-24</sub>-alkylthio radicals or C<sub>1-24</sub>-alkylcarbonylthio radicals, wherein the C<sub>1-24</sub>-alkyl groups and the C<sub>1-24</sub>-alkoxy groups may be branched or straight and saturated or unsaturated with 1 to 6 double bonds.

R<sub>IX1</sub> is particularly preferred a methyl radical, which optionally may be substituted with a hydroxy group or mercapto group or by C<sub>1-24</sub>-alkoxy radicals, C<sub>1-24</sub>-alkylcarbonyloxy radicals, C<sub>1-24</sub>-alkylthio radicals or C<sub>1-24</sub>-alkylcarbonylthio radicals, wherein the C<sub>1-24</sub>-alkyl groups and the C<sub>1-24</sub>-alkoxy groups may be branched or straight and saturated or unsaturated with 1 to 6 double bonds, and R<sub>IX2</sub> a hydrogen radical.

Especially good results are achieved by compounds, wherein R<sub>IX1</sub> and R<sub>IX2</sub> each is independently selected from the group which consists of hydrogen and a *n*-octadecylmethyl radical, wherein R<sub>IX1</sub> is preferably a *n*-octadecylmethyl radical and R<sub>2</sub> is a hydrogen radical. Special advantages are achieved, if the compound is of configuration (R).

Preferably R<sub>IX11</sub> represents OX<sub>IX11</sub> with X<sub>IX11</sub> = hydrogen.

#### X. Combined preparation of lipid metabolism inhibitor and hydroxy aminooxocarbyl derivatives

The hydroxy aminooxocarbyl derivative used according to the present invention correspond to the general formula (X):

wherein R<sub>X1</sub> is selected from the group which consists of hydrogen, substituted and unsubstituted C<sub>1-9</sub>-alkyl, substituted and unsubstituted hydroxy-C<sub>1-9</sub>-alkyl, substituted and unsubstituted C<sub>1-9</sub>-alkenyl, substituted and unsubstituted C<sub>1-9</sub>-alkynyl, substituted and unsubstituted

aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical, halogen and  $OX_{X1}$ ,

wherein  $X_{X1}$  is selected from the group which consists of hydrogen, substituted and unsubstituted  $C_{1-9}$ -alkyl, substituted and unsubstituted hydroxy- $C_{1-9}$ -alkyl, substituted and unsubstituted  $C_{1-9}$ -alkenyl, substituted and unsubstituted  $C_{1-9}$ -alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical,

wherein  $R_{X2}$  is selected from the group which consists of  $C_{1-26}$ -alkyl radicals,  $C_{1-26}$ -alkoxy radicals,  $C_{1-26}$ -alkoxy- $C_{1-26}$ -alkyl- radicals,  $C_{3-8}$ -cycloalkyl- $(C_{0-26})$ -alkyl radicals, wherein one or two carbon atoms of the cycloalkyl group may be replaced by nitrogen, oxygen or sulfur atoms, each  $C_{3-26}$ -alkyl radical and each  $C_{3-26}$ -alkoxy radical being branched or straight and each  $C_{3-8}$ -cycloalkyl radical, each  $C_{2-26}$ -alkyl radical and each  $C_{2-26}$ -alkoxy radical may be saturated or unsaturated with one or more double bonds and each  $C_{3-8}$ -cycloalkyl radical, each  $C_{1-26}$ -alkyl radical and each  $C_{1-26}$ -alkoxy radical may be substituted with hydroxy, amino, halogen and oxo groups or with the carbyl group  $COR_{X3}$ ,

wherein  $R_{X3}$  is selected from the group which consists of substituted and unsubstituted  $C_{1-26}$ -alkyl, hydroxy- $C_{1-26}$ -alkyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted aralkyl, substituted and unsubstituted  $C_{1-26}$ -alkenyl, substituted and unsubstituted  $C_{1-26}$ -alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, halogen and  $OX_{X3}$ ,

wherein  $X_{X3}$  is selected from the group which consists of hydrogen, substituted and unsubstituted  $C_{1-26}$ -alkyl, substituted and unsubstituted hydroxy- $C_{1-26}$ -alkyl, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted  $C_{1-26}$ -alkenyl, substituted and unsubstituted  $C_{1-26}$ -alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, a silyl, a cation of organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids.

Preferably  $R_{X2}$  represents the carboxylic acid group  $-COOH$ , wherein  $R_{X1}$  is a branched or straight  $C_{1-4}$ -alkyl group, particularly preferred an isopropyl group, as well as their pharmaceutically acceptable salts, esters and amides.

The salts of the carboxylic acid group are preferred, in which H is replaced by a metal of the first, second or third main group of the periodic system, ammonium or substituted ammonium, or ammonium compounds, which derive from ethylene diamine or amino acids. I.e. the salt compounds of hydroxy aminooxocarbylcarbonic acid derivatives and organic or inorganic bases (for example sodium salt, potassium salt, calcium salt, aluminium salt, ammonium salt,

magnesium salt, triethyl amine salt, ethanol amine salt, dicyclohexyl amine salt, ethylene diamine salt, N,N'-dibenzylethylene diamine salt etc.) as well as salts of amino acids (for example arginine salt, asparagine acid salt, glutamine acid salt etc.) and the like are formed.

Preferably additionally esters of the carboxylic acid group may be formed. Suitable examples of such esters are suitable mono and diesters, and preferred examples of such esters include alkylester (for example hexadecanylester, octadecanylester etc.).

# **XI. Combined preparation of lipid metabolism inhibitor and organophosphorus compounds, which either contain two oxyphosphorus groups or one oxyphosphorus group and one oxysulfur group**

The organophosphorus compounds used according to the present invention correspond to the general formula (XI):

wherein  $\text{Z}_{\text{XI}}$  is a phosphorus atom or a sulfur atom,

wherein  $\text{A}_{\text{XI}}$  is a straight  $\text{C}_{2-9}$ -alkylene chain having substituents which are the same or different and are selected from the group which consists of hydrogen, hydroxy, halogen, amino and oxo groups,  $\text{C}_{1-26}$ -alkyl radicals,  $\text{C}_{1-26}$ -alkoxy radicals,  $\text{C}_{1-26}$ -alkoxy- $\text{C}_{1-26}$ -alkyl radicals or  $\text{C}_{3-8}$ -cycloalkyl- $(\text{C}_{0-9})$ -alkyl radicals, wherein each  $\text{C}_{1-26}$ -alkyl radical and each  $\text{C}_{1-26}$ -alkoxy radical may be branched or straight and saturated or unsaturated with one or more double bonds and may be substituted with hydroxy, amino, halogen and oxo groups and the  $\text{C}_{3-8}$ -cycloalkyl group as well as the  $\text{C}_{0-9}$ -alkyl group of the  $\text{C}_{3-8}$ -cycloalkyl- $(\text{C}_{0-9})$ -alkyl group may contain one or more double bonds and one or two carbon atoms of the cycloalkyl group may be replaced by nitrogen, oxygen or sulfur atoms, and wherein the cycloalkyl group as well as the alkyl group may be substituted with hydroxy, halogen, amino, oxo groups with branched or straight  $\text{C}_{1-9}$ -alkyl groups and  $\text{C}_{2-9}$ -alkenyl groups, wherein the  $\text{C}_{1-9}$ -alkyl groups and  $\text{C}_{2-9}$ -alkenyl groups may be substituted with hydrogen, hydroxy, amino, halogen and oxo groups, wherein  $\text{R}_{\text{XI1}}$  and  $\text{R}_{\text{XI2}}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted  $\text{C}_{1-9}$ -alkyl, substituted and unsubstituted hydroxy- $\text{C}_{1-9}$ -alkyl, substituted and unsubstituted  $\text{C}_{1-9}$ -alkenyl, substituted and unsubstituted  $\text{C}_{1-9}$ -alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical, halogen,  $\text{OX}_{\text{XI1}}$  and  $\text{OX}_{\text{XI2}}$ , wherein  $\text{X}_{\text{XI1}}$  and  $\text{X}_{\text{XI2}}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsub-

stituted C<sub>1-9</sub>-alkyl, substituted and unsubstituted hydroxy-C<sub>1-9</sub>-alkyl, substituted and unsubstituted C<sub>1-9</sub>-alkenyl, substituted and unsubstituted C<sub>1-9</sub>-alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical, wherein R<sub>XI3</sub> and R<sub>XI4</sub> are the same or different and are selected from the group which consists of substituted and unsubstituted C<sub>1-26</sub>-alkyl, hydroxy-C<sub>1-26</sub>-alkyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted aralkyl, substituted and unsubstituted C<sub>1-26</sub>-alkenyl, substituted and unsubstituted C<sub>1-26</sub>-alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, halogen, OX<sub>XI3</sub> and OX<sub>XI4</sub>, wherein X<sub>XI3</sub> and X<sub>XI4</sub> are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted C<sub>1-26</sub>-alkyl, substituted and unsubstituted hydroxy-C<sub>1-26</sub>-alkyl, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted C<sub>1-26</sub>-alkenyl, substituted and unsubstituted C<sub>1-26</sub>-alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, silyl, cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids, and their pharmaceutically acceptable salts, esters and amides and salts of esters.

Preferably A<sub>XI</sub> is a C<sub>3-5</sub>-alkyl chain.

Particularly preferred are compounds, in which R<sub>XI2</sub> represents a methyl group and Z<sub>XI</sub>, R<sub>XI1</sub>, R<sub>XI3</sub>, R<sub>XI4</sub> are defined the same as above, wherein R<sub>XI1</sub> is preferably substituted with a hydroxy group at the C-atom adjacent to the heteroatom, and compounds, in which R<sub>XI2</sub> represents a hydroxy group wherein Z<sub>XI</sub>, R<sub>XI1</sub>, R<sub>XI3</sub>, R<sub>XI4</sub> is defined the same as above, wherein R<sub>XI1</sub> is preferably an acyl group, particularly preferably is a formyl, acetyl, propionyl or butyryl group.

Also compounds having the following structures are preferred:

## XII. Combined preparation of lipid metabolism inhibitor with 3-isoxazolidinones and hydroxy amine acids

These compounds are described in US patent document 4 405 357.

The compounds according to the invention contained in the pharmaceutical compositions correspond to the general formula (I):

wherein  $\text{A}_{\text{XII}}$  is selected from the group which consists of hydrogen, substituted and unsubstituted  $\text{C}_{1-28}$ -alkyl radicals, substituted and unsubstituted alkoxy- $(\text{C}_{0-28})$ -alkyl radicals, substituted and unsubstituted cycloalkyl- $(\text{C}_{0-28})$ -alkyl radicals, substituted and unsubstituted cycloalkoxy- $(\text{C}_{0-28})$ -alkyl radicals, substituted and unsubstituted amino- $(\text{C}_{0-28})$ -alkyl radicals and substituted, unsubstituted thio- $(\text{C}_{0-28})$ -alkyl radicals and substituted or unsubstituted acyl- $(\text{C}_{0-28})$ -alkyl radicals and halogen, wherein each alkyl radical, each alkoxy radical and each acyl

radical may be branched or straight and each alkyl radical, each alkoxy radical each acyl radical and each cycloalkyl group may be saturated or unsaturated with one or more double or triple bonds and one or two carbon atoms the cycloalkyl radicals may be replaced by nitrogen, oxygen or sulfur atoms,

R<sub>XII3</sub> is selected from the group which consists of hydrogen, substituted and unsubstituted alkyl groups, substituted and unsubstituted alkoxy-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted C<sub>3-14</sub>-cycloalkyl-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted Cycloalkoxy-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted amino-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted silyl-(C<sub>0-26</sub>)-alkyl radicals and substituted and unsubstituted thio-(C<sub>0-26</sub>)-alkyl groups, wherein each alkyl radical and each alkoxy radical may be branched or straight and each alkyl radical, each alkoxy radical and each cycloalkyl group may be saturated or unsaturated with one or more double or triple bonds and one or two carbon atoms of the cycloalkyl radicals may be replaced by nitrogen, oxygen or sulfur atoms,

or a carbon chain made of two C-atoms in A<sub>XII</sub> forms a ring together with R<sub>XII3</sub>, such that an isoxazolidone ring is formed, and

R<sub>XII4</sub> is selected from the group which consists of hydrogen, substituted and unsubstituted alkyl radicals, substituted and unsubstituted acyl radicals and substituted and unsubstituted cycloalkyl-(C<sub>0-26</sub>)-alkyl radicals, wherein each alkyl radical and each acyl radical may be branched or straight and each alkyl radical, each acyl radical and each cycloalkyl group may be saturated or unsaturated with one or more double or triple bonds and one or two carbon atoms of the cycloalkyl radicals may be replaced by nitrogen, oxygen or sulfur atoms.

Preferably A<sub>XII</sub> corresponds to the formula (XIIA)

wherein R<sub>XII1</sub> and R<sub>XII2</sub> are the same or different and are selected from the group which consists of hydrogen, hydroxy, halogen, substituted and unsubstituted amino radicals, substituted and unsubstituted alkyl radicals, substituted and unsubstituted alkoxy radicals and substituted and unsubstituted cycloalkyl-(C<sub>0-26</sub>)-alkyl radicals, wherein each alkyl radical and each alkoxy radical are branched or straight and each alkyl radical, each alkoxy radical and each cycloalkyl group are saturated or unsaturated with one or more double or triple bonds and one or two carbon atoms of the cycloalkyl radicals may be replaced by nitrogen, oxygen or sulfur atoms, R<sub>XII5</sub>, R<sub>XII6</sub> and R<sub>XII7</sub> are the same or different and are selected from the group which consists of hydrogen, hydroxy, halogen, substituted and unsubstituted alkyl groups, substituted and unsubstituted cycloalkyl-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted cycloalkoxy-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted alkoxy-(C<sub>0-26</sub>)-alkyl radicals, substituted and

unsubstituted amino groups and substituted, unsubstituted thio-(C<sub>0-26</sub>)-alkyl radicals and substituted or unsubstituted acyl radicals, wherein each alkyl radical, each alkoxy radical and each acyl radical is branched or straight and each alkyl radical, each alkoxy radical and each cycloalkyl group is saturated or unsaturated with one or more double or triple bonds and one or two carbon atoms of the cycloalkyl radicals may be replaced by nitrogen, oxygen or sulfur atoms,

wherein R<sub>XII5</sub> may alternatively form a ring with R<sub>XII1</sub>,

and R<sub>XII3</sub> and R<sub>XII7</sub> may comprise a carbon-oxygen-simple bond such that a ring structure is present.

The invention also includes the pharmaceutically acceptable salts, esters and salts of esters.

Preferably R<sub>XII1</sub> and R<sub>XII2</sub> are the same or different and selected from the group which consists of substituted and unsubstituted alkyl group, preferably C<sub>1</sub>-C<sub>4</sub>-alkyl groups.

Preferably R<sub>XII3</sub> is selected from the group which consists of hydrogen, substituted and unsubstituted alkyl group, preferably C<sub>1</sub>-C<sub>4</sub>-alkyl groups, substituted and unsubstituted aromatic C<sub>7</sub>-C<sub>14</sub>-cycloalkyl radicals, a pyranyl group and a t-butyl dimethylsilyl group and

wherein R<sub>XII8</sub> is selected from the group which consists of substituted and unsubstituted, preferably with halogen substituted alkyl groups, substituted and unsubstituted cycloalkyl(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted amino groups, substituted and unsubstituted alkoxy groups, substituted and unsubstituted phenoxy groups, substituted and unsubstituted alkylthio groups, substituted and unsubstituted, preferably unsubstituted or with halogen, methyl, methoxy, nitro, amino or CF<sub>3</sub>-groups substituted aromatic cycloalkylthio groups.

R<sub>XII4</sub> is preferably selected from the group which consists of hydrogen, substituted and unsubstituted alkyl radicals, substituted and unsubstituted phenyl radicals and

wherein Z<sub>XII</sub> is selected from the group which consists of hydrogen, halogen, C<sub>1-4</sub>-alkyl radicals and phenyl radicals and Y<sub>XII</sub> is selected from the group which consists of hydrogen, halo-

gen, C<sub>1-4</sub>-alkyl radicals, nitro radicals, methoxy radicals, methylenedioxy groups, wherein n is 0 or 1.

R<sub>XII7</sub> is preferably selected from the group which consists of hydrogen and halogen, or R<sub>XII3</sub> and R<sub>XII7</sub> comprise a carbon-oxygen-simple bond, such that a ring structure is present.

Compounds are particularly preferred, in which R<sub>XIII</sub> and R<sub>XII2</sub> independently are selected from the group which consists of methyl and ethyl, R<sub>XII4</sub> is

and

R<sub>XII5</sub> and R<sub>XII6</sub> are independently selected from the group which consists of hydrogen, chlorine, bromine and methoxy groups.

In particular compounds are preferred in which R<sub>XII4</sub> is

wherein Z is selected from the group which consists of 2-chloro, 2-bromo, 2-fluoro, and Y is selected from the group which consists of 4-chloro, 4-bromo, 4-fluoro, 5-fluoro and 4,5-methylenedioxy groups, wherein n is 0 or 1.

Compounds are particularly especially preferred, in which R<sub>XIII</sub> and R<sub>XII2</sub> are methyl groups and R<sub>XII3</sub> and R<sub>XII7</sub> are hydrogen or contain a carbon-oxygen-bond forming a ring structure.

Examples of preferred compounds are 3-chloro-N-(2-chlorophenyl)methyl-N-hydroxy-2,2-dimethylpropanamide, N-(2-chlorophenyl)methyl-N-hydroxy-2,2-dimethylpropanamide, 3-chloro-N-hydroxy-N-phenyl-2,2-dimethylpropanamide, N-(2-bromophenyl)-methyl-3-chloro-N-hydroxy-2,2-dimethylpropanamide, 3-chloro-N-hydroxy-2,2-dimethyl-N-(2-methylphenyl)methylpropanamide, 3-chloro-N-hydroxy-2,2-N-trimethylpropanamide, 3-chloro-N-hydroxy-2,2-dimethyl-N-(phenylmethyl)-propanamide, 3-chloro-N-(2,4-dichlorophenylmethyl)-N-hydroxy-2,2-dimethylpropanamide, 3-chloro-N-(2-chlorophenyl)methyl-N-

methoxy-2,2-dimethylpropanamide, 3,3-dichloro-N-(2-chlorophenyl)methyl-N-hydroxy-2,2-dimethylpropanamide, 3-chloro-N-(2-fluorophenyl)methyl-N-hydroxy-2,2-dimethylpropanamide, 3-bromo-N-(2-chlorophenyl)methyl-N-hydroxy-2,2-dimethylpropanamide, N-benzoyloxy-3-chloro-N-(2-chlorophenyl)methyl-2,2-dimethylpropanamide, N-acetoxy-3-chloro-N-(2-chlorophenyl)methyl-2,2-dimethylpropanamide, N-(chloroacetoxy)-3-chloro-N-(2-chlorophenyl)methyl-2,2-dimethylpropanamide, 2-(2-chlorophenyl)methyl-4,4-dimethyl-3-isoxazolidinone, 4,4-dimethyl-2-phenyl-3-isoxazolidinone, 2-(2-bromophenyl)methyl-4,4-dimethyl-3-isoxazolidinone, 4,4-dimethyl-2-(2-methyl-phenyl)methyl-3-isoxazolidinone, 2,4-trimethyl-3-isoxazolidinone, 4,4-dimethyl-2-phenylmethyl-3-isoxazolidinone, 2-(2,4-dichlorophenyl)methyl-4,4-dimethyl-3-isoxazolidinone, 5-chloro-2-(2-chlorophenyl)methyl-4,4-dimethyl-3-isoxazolidinone, 2-(2-chlorophenyl)methyl-5-methoxy-4,4-dimethyl-3-isoxazolidinone, 2-(2-fluorophenyl)methyl-4,4-dimethyl-3-isoxazolidinone, N-[(2-chlorophenyl)methyl]-N,3-dihydroxy-2,2-dimethylpropanamide, 3-chloro-N-[(2-chlorophenyl)methyl]-2,2-dimethyl-N-(methylamino-carbonyloxy)propanamide, 3-chloro-N-[(2-chlorophenyl)methyl]-N-[(2-tetrahydropyranyl)oxy]-2,2-dimethylpropanamide, 3-chloro-N-[(2-chlorophenyl)methyl]-2,2-dimethyl-N-[dimethyl(1,1-dimethyl-ethyl)silyloxy]propanamide, 3-acetoxy-N-[(2-chlorophenoxy)-methyl]-N-hydroxy-2,2-dimethylpropanamide, 2,[(2-chloro-4-fluorophenyl)methyl]-4,4-dimethyl-3-isoxazolidinone, 2-[(2-chloro-5-fluorophenyl)methyl]-4,4-dimethyl-3-isoxazolidinone, 2-[(2,4,5-trichlorophenyl)methyl]-4,4-dimethyl-3-isoxazolidinone, 2-[(2-chloro-6-fluorophenyl)methyl]-4,4-dimethyl-3-isoxazolidinone, 2-[(2-chlorophenyl)methyl]-5-ethoxy-4,4-dimethyl-3-isoxazolidinone, 2-[(2-chlorophenyl)methyl]-4,4-dimethyl-5-phenylamino-3-isoxazolidinone, 2-[(2-chlorophenyl)methyl]-5-hydroxy-4,4-dimethyl-3-isoxazolidinone, 3-chloro-N-[(2-chlorophenyl)methyl]-2,2-dimethyl-N-[(phenylamino)carbonyloxy]propanamide, 3-chloro-N-[(2-chlorophenyl)methyl]-2,2-dimethyl-N-[(2-chlorophenyl)methyl]-2,2-dimethyl-N-phenoxycarbonyl-oxy)propanamide, 3-chloro-N-[(2-chlorophenyl)methyl]-N-ethoxycarbonyloxy-2,2-dimethylpropanamide, N-benzoyloxy-3,3-dichloro-N-[(2-chlorophenyl)methyl]-2,2-dimethylpropanamide, N-(2-bromophenyl)methyl-3,3-dichloro-N-hydroxy-2,2-dimethylpropanamide, 3-chloro-N-[(2-chlorophenyl)methyl]-N-(4-nitrobenzoyloxy)-2,2-dimethylpropanamide, 3-chloro-N-[2-chlorophenylmethyl]-2,2-dimethyl-N-[(2-methylphenyl)carbonyloxy]propanamide, 3-chloro-N-dichloroacetoxy-N-[(2-chlorophenyl)methyl]-2,2-dimethylpropanamide, 3-chloro-N-[2-chlorophenyl)methyl]-2,2-dimethyl-N-[(4-methylphenyl)sulfonyloxy]propanamide, 3-chloro-N-[2-chlorophenyl)methyl]-2,2-dimethyl-N-[(1,1-dimethylethyl)carbonyl-oxy]propanamide, 3-chloro-N-[2-chlorophenyl)-methyl]-2,2-dimethyl-N-(ethylthiocarbonyloxy)propanamide, 3-chloro-N-[(2,2,2-trichloroethoxy)carbonyloxy]-N-[(2-chlorophenyl)methyl]-2,3-dimethylpropanamide, 3-chloro-N-[(2-chlorophenyl)aminocarbonyl-oxy-N-[(2-chlorophenyl)methyl]-2,2-dimethylpropanamide, 3-chloro-N-[(4-chlorophenyl)aminocarbonyloxy-N-[(2-chlorophenyl)methyl]-2,2-dimethylpropanamide, 3-chloro-N-[2-chlorophenyl)methyl]-2,2-

dimethyl-N-(phenylmethoxy)-propanamide, 3-chloro-N-[(2,4-dichlorophenoxy)acetoxy]-N-[(2-chlorophenyl)methyl]-2,2-dimethyl-propanamide, 3-chloro-N-[2-chlorophenyl)methyl]-2,2-dimethyl-N-[(3-trifluoromethyl)benzoyloxypropanamide, 3-chloro-N-[2-chlorophenyl)methyl]-2,2-dimethyl-N-[(4-methylphenyl)aminocarbonyl-oxy)-propanamide, 3-chloro-N-[2-chlorophenyl)methyl]-N-[(3,4-chlorophenyl)aminocarbonyloxy]-2,2-dimethylpropanamide, 3-chloro-N-(3-chloro-2,2-dimethyl-1-oxo-propoxy)-N-[(2-chlorophenyl)-methyl]-2,2-dimethylpropanamide, 3-bromo-N-[(2-bromophenyl)-methyl]-N-hydroxy-2,2-dimethylpropanamide, 3-chloro-N-[(2-chlorophenyl)-methyl]-N-[(2-fluorophenyl)aminocarbonyloxy]-2,2-dimethylpropanamide, 3-chloro-N-[(2-chlorophenyl)methyl]-N-[(4-methoxyphenyl)aminocarbonyloxy]-2,2-dimethylpropanamide, 3-chloro-N-[(2-chlorophenyl)methyl]-N-[(3-trifluoromethylphenyl)-aminocarbonyloxy]-2,2-dimethylpropanamide, 3-bromo-N-[(2-chlorophenyl)methyl]-N-(methylaminocarbonyloxy)-2,2-dimethyl-propanamide, 3-bromo-N-(2-chloroacetoxy)-N-[(2-chlorophenyl)-methyl]-2,2-dimethylpropanamide, 3-chloro-N-[2,5-dichloro-(formylamino)-benzoyl]oxy-N-[(2-chlorophenyl)methyl]-2,2-dimethylpropanamide, 3-bromo-N-[(2-bromophenyl)methyl]-N-chloroacetoxy-2,2-dimethylpropanamide, 3-bromo-N-[(2-bromophenyl)-methyl]-N-(methylcarbonyloxy)-2,2-dimethylpropanamide, 3-bromo-N-[(2-bromophenyl)methyl]-N-[(2-chlorophenyl)aminocarbonyloxy]-2,2-dimethylpropanamide, 2-[(2-chlorophenyl)methyl]-N-hydroxy-2,2-dimethyl-3-methylthio-propanamide, 3-phenylcarbonyloxy)-N-[(2-chlorophenyl)-methyl]-N-hydroxy-2,2-dimethylpropanamide, 2-[(4-chlorophenyl)methyl]-4,4-dimethyl-3-isoxazolidinone, 2-[(3,4-dichlorophenyl)methyl]-4,4-dimethyl-3-isoxazolidinone, 2-[(chlorophenyl)methyl]-4,4-dimethyl-3-isoxazolidinone-5-ylacetate, 2-[(chlorophenyl)methyl]-4,4-dimethyl-3-isoxazolidinone-5-ylbenzoate, 2-[(chlorophenyl)methyl]-4,4-dimethyl-3-isoxazolidinone-5-ylchloroacetate, 2-[(chlorophenyl)methyl]-4,4-dimethyl-3-isoxazolidinone-5-ylphenylcarbamate, 2-[(chlorophenyl)methyl]-4,4-dimethyl-3-isoxazolidinone-5-ylmethyl-carbamate, 2-[(2-chloro-4-cyanophenyl)methyl]-4,4-dimethyl-3-isoxazolidinone, 2-[(2-chloro-5-methoxyphenyl)methyl]-4,4-dimethyl-3-isoxazolidinone, 2-[(2-chloro-4-methoxyphenyl)-methyl]-4,4-dimethyl-3-isoxazolidinone, 2-[(2,4-difluorophenyl)methyl]-4,4-dimethyl-3-isoxazolidinone, 2-[(4-bromo-2-chlorophenyl)methyl]-4,4-dimethyl-3-isoxazolidinone, 2-[(2-bromo-4-fluorophenyl)methyl]-4,4-dimethyl-3-isoxazolidinone, 2-[(6-chloro-1,3-benzodioxol-5-yl)methyl]-4,4-dimethyl-3-isoxazolidinone, 2-[(2-chlorophenyl)methyl]-4,4-dimethyl-5-phenoxy-3-isoxazolidinone, 2-[(2-chlorophenyl)methyl]-4,4-dimethyl-5-(1-methylethoxy)-3-isoxazolidinone, 2-[(2-chlorophenyl)methyl]-4,4-dimethyl-5-(phenylmethoxy)-3-isoxazolidinone, 2-[(2-bromophenyl)methyl]-5-chloro-4,4-dimethyl-3-isoxazolidinone, 2-[(2,5-dichlorophenyl)methyl]-4,4-dimethyl-3-isoxazolidinone, 2-[(2-chlorophenyl)methyl]-4,4-dimethyl-5-propoxy-3-isoxazolidinone, 2-[(2-chlorophenyl)methyl]-4,4-dimethyl-5-(2-propenyloxy)-3-isoxazolidinone, 2-[(2-chlorophenyl)methyl]-4,4-dimethyl-5-(2-methoxyethoxy)-3-

isoxazolidinone, 2-[(4-fluoro-2-iodophenyl)methyl]-4,4-dimethyl-3-isoxazolidinone, 2-[(2-chlorophenyl)methyl]-5-cyclopentoxy-4,4-dimethyl-3-isoxazolidinone, 2-[(2-chlorophenyl)methyl]-4,4-dimethyl-5-(4-nitrophenoxy)-3-isoxazolidinone, 2-[(2-chlorophenyl)methyl]-5-cyclopropyl-methoxy-4,4-dimethyl-3-isoxazolidinone, 2-[(2-bromophenyl-(methyl))-4,4-dimethyl-5-(2-propinoxy)-3-isoxazolidinone, 2-[(2-chlorophenyl)methyl]-5-(3-butinoxy)-4,4-dimethyl-3-isoxazolidinone, 2-[(2-chlorophenyl)methyl]-5-(2-butinoxy)-4,4-dimethyl-3-isoxazolidinone, 2-[(2-chlorophenyl)methyl]-5-(3-butenoxy)-4,4-dimethyl-3-isoxazolidinone, 2-[(2-chlorophenyl)-methyl]-5-pentoxy-4,4-dimethyl-3-isoxazolidinone, 2-[(2-chlorophenyl)methyl]-5-hexoxy-4,4-dimethyl-3-isoxazolidinone, 2-[(2-chlorophenyl)methyl]-5-(1-methylpropoxy)-4,4-dimethyl-3-isoxazolidinone, 2-[(2-chlorophenyl)methyl]-5-(3-methyl-3-butenoxy)-4,4-dimethyl-3-isoxazolidinone, 2-[(2-chlorophenyl)-methyl]-5-butoxy-4,4-dimethyl-3-isoxazolidinone, 2-[(2-chloro-phenyl)methyl]-4,4-dimethyl-3-isoxazolidinone.

### XIII. Combined preparation of lipid metabolism inhibitor with thiadiazole derivatives

The thiadiazole derivatives used according to the present invention correspond to the general formula (XIII):

wherein  $n$  is an integer from 0 to 4, and

wherein  $R_{XIII1}$ ,  $R_{XIII2}$ ,  $R_{XIII3}$ ,  $R_{XIII4}$ ,  $R_{XIII5}$  and  $R_{XIII6}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl radicals, substituted and unsubstituted alkoxy radicals, substituted and unsubstituted acyl radicals, substituted or unsubstituted cycloalkyl-( $C_{0-26}$ )-alkyl radicals, substituted and unsubstituted cycloalkyl-( $C_{0-26}$ )-alkoxy radicals and halogen, wherein each alkyl radical, each alkoxy radical and each acyl radical may be branched or straight and each alkyl radical, each acyl radical, each alkoxy radical and each cyclo-( $C_{0-26}$ )-alkyl group may be saturated or unsaturated with one or more double or triple bonds and one or two carbon atoms of the cycloalkyl radicals may be replaced by nitrogen, oxygen or sulfur atoms.

Preferably  $R_{XIII1}$  represents  $COOC_2H_5$ .

Furthermore compounds are preferred, in which  $R_{XIII2}$  to  $R_{XIII6}$  are selected from the group which consists of hydrogen and halogen, in particular chlorine,.

Preferably n furthermore represents 1 or 2.

#### XIV. Combined preparation of lipid metabolism inhibitor and a nitrogen-oxygen-heterocycle

The compounds according to the invention contained in the pharmaceutical compositions correspond to the general formula (XIV):

wherein  $Y_{XIV}$  is a  $C_{1-3}$ -alkenylene group, which is substituted with the substituents  $R_{XIV1}$  and  $R_{XIV2}$  and optionally with the substituents  $R_{XIV3}$  to  $R_{XIV6}$ ,

wherein  $R_{XIV1}$  to  $R_{XIV8}$  are the same or different and are selected from the group which consists of hydrogen, hydroxy, halogen, substituted and unsubstituted alkyl groups, substituted and unsubstituted cycloalkyl- $(C_{0-26})$ -alkyl radicals, substituted and unsubstituted cycloalkoxy- $(C_{0-26})$ -alkyl radicals, substituted and unsubstituted alkoxy- $(C_{0-26})$ -alkyl radicals, substituted and unsubstituted amino groups and substituted, unsubstituted thio- $(C_{0-26})$ -alkyl radicals, substituted and unsubstituted sulfonyl- $(C_{0-26})$ -alkyl radicals, substituted and unsubstituted sulfinyl- $(C_{0-26})$ -alkyl radicals and substituted or unsubstituted acyl radicals, wherein each alkyl radical, each alkoxy radical and each acyl radical may be branched or straight and each alkyl radical, each alkoxy radical and each cycloalkyl group may be saturated or unsaturated with one or more double or triple bonds and one or two carbon atoms the cycloalkyl radicals may be replaced by nitrogen, oxygen or sulfur atoms and

$R_{XIV13}$  and  $R_{XIV14}$  are defined the same as  $R_{XIV1}$  to  $R_{XIV8}$  or together form an oxo group, wherein  $Z_{XIV}$  represents the organophosphorus group

wherein  $R_{XIV9}$  and  $R_{XIV10}$  are the same or different and are selected from the group which con-

sists of hydrogen, substituted and unsubstituted (C<sub>1-26</sub>)-alkyl groups, substituted and unsubstituted hydroxy-(C<sub>1-26</sub>)-alkyl radicals, substituted and unsubstituted cycloalkyl-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted acyl, halogen, OX<sub>XIV9</sub> or OX<sub>XIV10</sub>, wherein each alkyl radical, each alkoxy radical and each acyl radical may be branched or straight and each alkyl radical, each alkoxy radical and each cycloalkyl group may be saturated or unsaturated with one or more double or triple bonds and one or two carbon atoms the cycloalkyl radicals may be replaced by nitrogen, oxygen or sulfur atoms, wherein X<sub>XIV9</sub> or X<sub>XIV10</sub> are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted (C<sub>1-26</sub>)-alkyl groups, substituted and unsubstituted hydroxy-(C<sub>1-26</sub>)-alkyl radicals, substituted and unsubstituted cycloalkyl-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted acyl, a silyl, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids, wherein each alkyl radical, each alkoxy radical and each acyl radical may be branched or straight and each alkyl radical, each alkoxy radical and each cycloalkyl group may be saturated or unsaturated with one or more double or triple bonds and one or two carbon atoms of the cycloalkyl radicals may be replaced by nitrogen, oxygen or sulfur atoms, or wherein Z<sub>XIV</sub> represents the amino group

wherein R<sub>XIV11</sub> and R<sub>XIV12</sub> are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl groups, substituted and unsubstituted cycloalkyl-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted cycloalkoxy-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted alkoxy-(C<sub>0-26</sub>)-alkyl radicals and substituted or unsubstituted acyl radicals, wherein each alkyl radical, each alkoxy radical and each acyl radical may be branched or straight and each alkyl radical, each alkoxy radical and each cycloalkyl group may be saturated or unsaturated with one or more double or triple bonds and one or two carbon atoms of the cycloalkyl radicals may be replaced by nitrogen, oxygen or sulfur atoms, wherein B<sub>XIV</sub> is selected from the group which consists of substituted and unsubstituted C<sub>1-26</sub>-alkenylene groups, wherein a C-atom may be replaced by an oxygen atom and a C-atom may be replaced by a sulfur atom or two C-atoms may be replaced by an S-hetrocycle and wherein each alkenylene radical may be branched or straight and saturated or unsaturated with one or more double or triple bonds and may be substituted with one or more hydroxy groups, halogen groups or oxo groups.

Preferably R<sub>XIV13</sub> and R<sub>XIV14</sub> together form an oxo group in α-position regarding the nitrogen atom.

Preferably  $Y_{XIV}$  represents a methylene group, which is particularly preferably substituted with two methyl groups.

Furthermore compounds are advantageous, in which  $B_{XIV}$  represents the ether group (XIVA)

wherein  $A_{XIV1}$  is absent or a  $(C_{1-9})$ -alkylene radical, and  $A_{XIV2}$  is absent or selected from the group which consists of  $(C_{1-9})$ -alkylene radicals, a sulfur atom and a  $(C_{3-8})$ -heterocycle, which comprises at least one sulfur atom. Particularly preferably  $A_{XIV1}$  and  $A_{XIV2}$  each represent a methylene group.

Also compounds are advantageous, in which  $B_{XIV}$  represents the keto group (XIVB)

wherein  $A_{XIV3}$  and  $A_{XIV4}$ , out of which one or both may be absent, are the same or different and are selected from the group which consists of  $(C_{1-9})$ -alkylene radicals, wherein all  $(C_{1-9})$ -alkylene radicals may be branched or straight, may contain one or more double bonds or may be substituted with a hydroxy group or a halogen group. Particularly preferred  $A_{XIV3}$  is absent and  $A_{XIV4}$  represents a methylene or an ethylene group.

Preferably  $B_{XIV}$  is further a 2-hydroxypropylene group.

$R_{XIV9}$  and  $R_{XIV10}$  preferably represent  $OX_{XIV9}$  and  $OX_{XIV10}$ , wherein  $X_{XIV9}$  and  $X_{XIV10}$  are the same or different and are selected from the group which consists of a metal of the first, second or third main group of the periodic system, in particular sodium and potassium, and methyl, ethyl.

Special features of the above definitions and suitable examples thereof are given below:

„Acyl“ is a substituent which originates from an acid such as from an organic carboxylic acid, carbonic acid, carbamic acid or the thioacid or imidic acid corresponding to the individually present acids, or from an organic sulfonic acid, wherein in each case these acids comprise aliphatic, aromatic and/or heterocyclic groups in the molecule as well as carbamoyl or carbamimidoyl.

Suitable examples of these acyl groups were given below:.

Acyl radicals originating from aliphatic acid are designated as aliphatic acyl groups and include:

Alkanoyl (e.g. formyl, acetyl, propionyl, butyryl, isobutyryl, valeryl, isovaleryl, pivaloyl etc.);  
alkenoyl (e.g. acryloyl, methacryloyl, crotonoyl etc.);  
alkylthioalkanoyl (for example methylthioacetyl, ethylthioacetyl etc.)  
alkane sulfonyl (for example mesyl, ethane sulfonyl, propane sulfonyl etc.);  
alkoxycarbonyl (for example methoxycarbonyl, ethoxycarbonyl, propoxycarbonyl, isopropoxycarbonyl, butoxycarbonyl, isobutoxycarbonyl etc.);  
alkylcarbamoyl (for example methylcarbamoyl etc.);  
(N-alkyl)-thiocarbamoyl ( for example (N-methyl)-thiocarbamoyl etc.);  
alkylcarbamimidoyl (for example methylcarbamimidoyl etc.);  
oxalo;  
alkoxalyl (for example methoxalyl, ethoxalyl, propoxalyl etc.).

In the above examples of aliphatic acyl groups the aliphatic hydrocarbon part, in particular the alkyl group and the alkane radical may optionally contain one or more suitable substituents, such as amino, halogen (for example fluorine, chlorine, bromine etc.), hydroxy, hydroxyimino, carboxy, alkoxy (for example methoxy, ethoxy, propoxy etc.), alkoxycarbonyl, acylamino (for example benzyloxycarbonylamino etc.), acyloxy (for example acetoxy, benzoyloxy etc.) and the like. Preferred aliphatic acyl radicals with such substituents are for example alkanoyls substituted with amino, carboxy, amino and carboxy, halogen, acylamino or the like.

Acyl radicals originating from an acid with substituted or unsubstituted aryl groups, wherein the aryl group may comprise phenyl, toluyl, xylyl, naphthyl and the like are designated as aromatic acyl radicals. Suitable examples are given below:

Aroyl (for example benzoyl, toluoyl, xyloyl, naphthoyl, phthaloyl etc.);  
Aralkanoyl (for example phenylacetyl etc.);  
Aralkenoyl (for example cinnamoyl etc.);  
Aryloxyalkanoyl (for example phenoxyacetyl etc.);  
Arylthioalkanoyl (for example phenylthioacetyl etc.);  
Arylaminoalkanoyl (for example N-phenylglycyl, etc.);  
Arene sulfonyl (for example benzene sulfonyl, tosyl bzw. toluene sulfonyl, naphthalene sulfonyl etc. );  
Aryloxycarbonyl (for example phenoxy carbonyl, naphthyl-oxycarbonyl etc.);  
Aralkoxycarbonyl (for example benzyloxycarbonyl etc.);  
Arylcarbamoyl (for example phenylcarbamoyl, naphthylcarbamoyl etc.);  
Arylglyoxyloyl (for example phenylglyoxyloyl etc.).

In the present examples of aromatic acyl radicals the aromatic hydrocarbon part (in particular the aryl radical) and/or the aliphatic hydrocarbon part (in particular the alkane radical) may optionally contain one or more suitable substituents, such as those which were already mentioned as suitable substituents of the alkyl group and the alkane radical. In particular and as an example for preferred aromatic acyl radicals with particular substituents, aroyl substituted with halogen and hydroxy or by halogen and acyloxy and acyloxy and aralkanoyl substituted with hydroxy, hydroxyimino, dihalogenalkanoyloxyimino are mentioned as well as arylthiocarbamoyl (for example phenylthiocarbamoyl etc.); arylcarbamimidoyl (for example phenylcarbamimidoyl etc.).

A heterocyclic acyl radical is understood to be an acyl radical which originates from an acid with heterocyclic group. These include:

heterocyclic carbonyl in which the heterocyclic radical is an aromatic or aliphatic 5 to 6 membered heterocycle and has at least one heteroatom from the group nitrogen, oxygen and sulfur (for example thiophenyl, furoyl, pyrrolcarbonyl, nicotinoyl etc.);

heterocyclic alkanoyl, in which the heterocyclic radical is 5 to 6 membered and has at least one heteroatom from the group nitrogen, oxygen and sulfur (for example thiophenyl-acetyl, furylacetyl, imidazolylpropionyl, tetrazolylacetyl, 2-(2-amino-4-thiazolyl)-2-methoxyiminoacetyl etc.) and the like.

In the above examples of heterocyclic acyl radicals the heterocycles and/or the aliphatic hydrocarbon part may optionally contain one or more suitable substituents, such as the same as those which were mentioned as suitable for alkyl and alkane groups.

„Alkyl“ is a straight- or branched-chain alkyl radical having up to 9 carbon atoms, unless defined otherwise, such as methyl, ethyl, propyl, isopropyl, butyl, isobutyl, tert.-butyl, pentyl, hexyl and the like.

„Alkenyl“ includes straight- or branched-chain alkenyl groups with up to 9 carbon atoms, unless defined otherwise, for example vinyl, propenyl (for example 1-propenyl, 2-propenyl), 1-methylpropenyl, 2-methylpropenyl, butenyl, 2-ethylpropenyl, pentenyl, hexenyl.

„Alkynyl“ includes straight- or branched-chain alkynyl radicals having up to 9 carbon atoms, unless defined otherwise.

Cycloalkyl preferably represents an optionally substituted C<sub>3</sub> to C<sub>7</sub> cycloalkyl. alkyl, alkoxy (for example methoxy, ethoxy etc.), halogen (for example fluorine, chlorine, bromine etc.),

nitro and the like are inter alia suitable as possible substituents.

Aryl is an aromatic hydrocarbon radical such as phenyl, naphthyl etc., which may optionally contain one or more suitable substituents such as alkoxy (for example methoxy, ethoxy etc.), halogen (for example fluorine, chlorine, bromine etc.), nitro and the like.

„Aralkyl“ includes mono-, di-, triphenylalkyls such as benzyl, phenethyl, benzhydryl, trityl and the like, wherein the aromatic part may optionally contain one or more suitable substituents such as alkoxy (for example methoxy, ethoxy etc.), halogen (for example fluorine, chlorine, bromine etc.), nitro and the like.

„Alkylene“ includes straight- or branched-chain alkylene groups, which contain up to 9 carbon atoms and may be represented by the formula  $-(C_nH_{2n})-$  in which n is an integer from 1 to 9, such as methylene, ethylene, trimethylene, methylethylene, tetramethylene, 1-methyltrimethylene, 2-ethylethylene, pentamethylene, 2-methyltetramethylene, isopropylethylene, hexamethylene, and the like. Preferred alkylene radicals contain up to 4 carbon atoms and radicals with 3 carbon atoms, such as for example trimethylene are particularly preferred.

„Alkenylene“ includes straight- or branched-chain alkenylene groups with up to 9 carbon atoms which may be reproduced by the formula:

in which n is an integer from 2 to 9, for example vinylene, propenylene (for example 1-propenylene, 2-propenylene), 1-methylpropenylene, 2-methylpropenylene, butenylene, 2-ethylpropenylene, pentenylene, hexenylene and the like. The alkenylene radical may particularly preferably contain up to 5 carbon atoms and in particular 3 carbon atoms, for example 1-propenylene.

„Hydroxyalkylene“ may include straight- or branched-chain alkylene radicals which contain up to 9 carbon atoms, wherein one or more selected carbon atoms are substituted with a hydroxy group. These radicals may be represented by the formula:

in which n is an integer from 1 to 9 and z is an integer, to which  $z \leq n$  applies. Suitable examples of such hydroxyalkylene groups include hydroxymethylene, hydroxyethylene (for example 1-hydroxyethylene and 2-hydroxyethylene), hydroxytrimethylene (for example 1-hydroxytrimethylene, 2-hydroxytrimethylene and 3-hydroxytrimethylene), hydroxytetramethylene (for example 2-hydroxytetramethylene), 2-hydroxy-2-methyltrimethylene, hydroxypentamethylene (for example 2-hydroxypentamethylene), hydroxyhexamethylene (for example 2-hydroxyhexamethylene) and the like. A lower hydroxyalkylene with up to 4 car-

bon atoms is particularly preferred and in particular one with 3 carbon atoms for example 2-hydroxytrimethylen.

„Alkyleneamine“ includes straight- or branched-chain alkylene amine groups, which contain up to 9 carbon atoms and may be represented by the formula:

in which n and m may be the same or different and be an integer from 0 to 9, to which  $1 \leq n + m \leq 9$  applies, such as methyleneamine, ethyleneamine, dimethylene amine, trimethylene amine, methylene ethyleneamine, tetramethylene amine, 1-methyltrimethylene amine, 2-ethylethylene amine, ethylenemethylene amine, pentamethylene amine, 2-methyltetramethylene amine, isopropylethylene amine, hexamethylene amine, and the like. Preferred alkylene amine radicals contain 2 carbon atoms, which are end positioned. Dimethylene amine is particularly preferred. The hydrogen atoms may be replaced by substituents, for example halogen radicals.

„Alkyleneimine“ includes straight- or branched-chain alkyleneimine groups, which contain up to 9 carbon atoms and may be represented by the formula

the formula  $-(C_nH_{2n})-N=(C_mH_{2m-1})-$

in which n and m may be the same or different and are an integer from 0 to 9, to which  $1 \leq n + m \leq 9$  applies, such as methyleneimine, ethyleneimine, dimethyleneimine, trimethyleneimine, methylenethyleneimine, tetramethyleneimine, 1-methyltrimethyleneimine, 2-ethylethyleneimine, ethylenemethyleneimine, pentamethyleneimine, 2-methyltetramethyleneimine, isopropylethyleneimine, hexamethyleneimine, and the like. Preferred alkylene imine radicals contain 2 carbon atoms, which are end positioned. Dimethyleneimine is particularly preferred. The hydrogen atoms may also be replaced by substituents, for example by halogen radicals.

„Alkenyleneamine“ includes straight- or branched-chain alkenylene amine groups having up to 9 carbon atoms, which may be represented by the formula

in which n and m are the same or different and are an integer from 2 to 9, to which  $m + n \leq 9$  applies, and o is a number between 0 and 7, to which  $o + n \leq 9$  applies, for example vinyleneamine, methylenevinyleneamine, divinyleneamine, propenyleneamine (for example 1-propenyleneamine, 2-propenyleneamine), methylenpropenyleneamine, 1-methylpropenyleneamine, 2-methylpropenyleneamine, butenyleneamine, 2-ethylenepropenyleneamine, pentenyleneamine, hexenyleneamine, vinylmethylenamine and the like. The hydrogen atoms may also be replaced by substituents, for example by halogen radicals.

„Alkenyleneimine“ includes straight- or branched-chain alkenylene imine groups having up to 9 carbon atoms, which may be represented by the formula

in which n and m are the same or different and are an integer from 2 to 9, to which  $m + n \leq 9$  applies, and o is a number from 0 to 7, to which  $o + n \leq 9$  applies, for example vinyleneimine, methylenevinyleneimine, ethylenevinyleneimine, propenyleneimine (for example 1-propenylene imine, 2-propenylene imine), methylenepropenyleneimine, 1-methylpropenyleneimine, 2-methylpropenyleneimine, butenyleneimine, 2-ethylenepropenyleneimine, pentenyleneimine, hexenyleneimine, vinylmethylenimine and the like. The hydrogen atoms may also be replaced by substituents, for example by halogen radicals.

„Hydroxyalkyleneamine“ may be straight- or branched-chain alkylene radicals which contain up to 9 carbon atoms, wherein at least one selected carbon atom is substituted with a hydroxy group; these radicals being represented by the formula

in which n and m are the same or different and are an integer from 0 to 9, to which  $1 \leq n + m \leq 9$  applies, and z and y are the same or different and are an integer, to which  $0 \leq z \leq n$  and  $0 \leq y \leq m$  and  $y + z \geq 1$  applies. Suitable examples of such hydroxyalkyleneamine groups include hydroxymethyleneamine, hydroxyethyleneamine (for example 1-hydroxyethyleneamine and 2-hydroxyethyleneamine), hydroxytrimethyleneamine (for example 1-hydroxytrimethylene, 2-hydroxytrimethyleneamine and 3-hydroxytrimethyleneamine), hydroxytetramethyleneamine (for example 2-hydroxytetramethyleneamine), 2-hydroxy-2-methyltrimethyleneamine, hydroxypentamethyleneamine (for example 2-hydroxypentamethyleneamine), hydroxyhexamethyleneamine (for example 2-hydroxyhexamethyleneamine), methylenehydroxymethyleneamine, methylenehydroxyethyleneamine and the like. A lower hydroxyalkylene amine with 2 carbon atoms and one nitrogen atom is particularly preferred wherein both carbon atoms are end positioned. The hydrogen atoms may also be replaced by substituents, for example by halogen radicals.

„Hydroxyalkyleneimine“ includes straight- or branched-chain alkylene radicals, which contain up to 9 carbon atoms, wherein at least one selected carbon atom is substituted with a hydroxy group. These radicals may be represented by the formula

in which n and m are the same or different and are an integer from 0 to 9, to which  $1 \leq n + m \leq 9$  applies, and z and y are the same or different and an integer, to which  $0 \leq z \leq n-1$  and  $0 \leq y \leq m-1$  and  $y + z \geq 1$  applies. Suitable examples of such hydroxyalkyleneimine groups include hydroxymethyleneimine, hydroxyethyleneimine (for example 1-hydroxyethyleneimine and 2-hydroxyethyleneimine), hydroxytrimethyleneimine (for example 1-hydroxytri-

methyleneimine, 2-hydroxytrimethyleneimine and 3-hydroxytrimethyleneimine), hydroxy-tetramethyleneimine (for example 2-hydroxy-tetramethyleneimine), 2-hydroxy-2-methyl-trimethylene imine, hydroxypentamethyleneimine (for example 2-hydroxypentamethyleneimine), hydroxyhexamethyleneimine (for example 2-hydroxyhexamethyleneimine), methylenehydroxymethyleneimine, methylenehydroxyethyleneimine and the like. A lower hydroxyalkyleneimine with 2 carbon atoms and a nitrogen atom, wherein the two carbon atoms are end positioned, is particularly preferred. The hydrogen atoms may also be replaced by substituents, for example by halogen radicals.

The 5 and 6 membered cyclic compounds, which are represented by  $B_{IV}$  may be aromatic or aliphatic and may be substituted for example by alkyl groups with up to 7 carbon atoms and hydroxy groups.

The 5 and 6 membered heterocyclic compounds, which may be represented by  $R_{VIII}$  and  $R_{VIII2}$  as well as  $R_{XI}$  and  $R_{X2}$ , and which contain beside carbon one or two nitrogen, oxygen or sulfur atoms as a ring member, may be saturated or unsaturated.

„Alkoxy radical“ is, unless defined otherwise, a straight- or branched-chain alkoxy radical having up to 26 carbon atoms, such as a methoxy, ethoxy radicals, etc.. It may be substituted for example by hydroxy, amino, halogen, oxo groups and alkoxy radicals, such as methoxy-, ethoxy radicals.

„Alkoxy-( $C_{0-26}$ )-alkyl radicals“ are alkoxy radicals, which may also be bound to the basic structure upon an alkyl radical. The alkyl- and alkoxy groups are defined the same as above.

„Cycloalkyl-( $C_{0-26}$ )-alkyl radicals“ are cyclic compounds having 3 to 8 carbon atoms, unless defined otherwise, which are bound to the basic structure directly or upon an alkylene radical. The alkylene radical may be branched, straight and saturated or unsaturated with double bonds. Possible substituents of the cycloalkyl radicals are inter alia alkoxy radicals, alkyl radicals, hydroxy radicals, halogen radicals, amino radicals, oxo radicals. Providing a respective number of double bonds, the cycloalkyl radicals may also be aromatic, i.e. may be aryl-( $C_{0-26}$ )-alkyl radicals (for example phenyl, pyridyl, naphthyl etc.). In particular the aromatic cyclic compounds may further contain substituents, such as nitro groups and  $CF_3$  and phenyl radicals.

„Cycloalkoxy-( $C_{0-26}$ )-alkyl radicals“ are cyclic compounds with 3 to 8 carbon atoms, which are bound to the basic structure directly at an oxygen or upon an alkylene radical. The alkylene radical may be branched, straight and may be saturated or unsaturated with double bonds. Possible substituents of the cycloalkyl radicals are inter alia radicals (also alkylenedi-

oxy radicals, such as methylenedioxy), alkyl radicals, hydroxy radicals, halogen radicals, amino radicals, oxo radicals. Providing the respective number of double bonds the cycloalkyl radicals may also be multicycles and aromatic (for example phenoxy, pyridoxy, naphthoxy etc.). In particular the aromatic cyclic compounds further may contain substituents, such as nitro groups,  $\text{CF}_3$ -groups and phenyl radicals.

For example the „amino radicals“ may be substituted for example with the with the above defined alkyl radicals or cycloalkyl-( $\text{C}_{0-26}$ )-alkyl radicals.

„Amino-( $\text{C}_{0-26}$ )-alkyl radicals“ are amino radicals, which also may be bound to the basic structure upon an alkyl radical. The alkyl and amino groups are defined the same as above.

„Silyl radicals“ may be substituted for example with the above defined alkyl radicals or cycloalkyl-( $\text{C}_{0-26}$ )-alkyl radicals.

„Silyl“-( $\text{C}_{0-26}$ )-alkyl radicals“ are silyl radicals, which also may be bound to the basic structure upon an alkyl radical. The alkyl and silyl groups are defined the same as above.

„Thio-( $\text{C}_{0-26}$ )-alkyl radicals“ may be substituted for example with the above defined alkyl radicals or cycloalkyl-( $\text{C}_{0-26}$ )-alkyl radicals. The ( $\text{C}_{0-26}$ )-alkyl groups are straight- or branched-chain alkylene radicals such as methylene, ethylene, propylene, isopropylene, butylene, isobutylene, tert.-butylene, pentylene, hexylene and the like. They may contain double or triple bonds and be substituted for example with hydroxy, amino, halogen (for example fluorine, bromine, chlorine), oxo radicals and alkoxy radicals, such as methoxy, ethoxy radicals.

Preferably, the radicals  $\text{X}_{13}$  to  $\text{X}_{\text{VII}3}$  and  $\text{X}_{14}$  to  $\text{X}_{\text{VII}4}$  as well as  $\text{R}_{\text{VIII}5}$ ,  $\text{R}_{\text{IX}11}$ ,  $\text{X}_{\text{XI}3}$  and  $\text{X}_{\text{XI}4}$ ,  $\text{X}_{\text{II}1}$  and  $\text{X}_{\text{II}2}$  may be selected such, that esters form on the phosphono group or the sulfonyl group. Suitable examples of esters of the compounds used according to the present invention are suitable mono and diesters, and preferred examples of such esters includes alkylester (for example methylester, ethylester, propylester, isopropylester, butylester, isobutylester, hexylester etc.);

aralkyl ester (benzyl ester, phenethyl ester, benzohydryl ester, trityl ester etc.);

aryl ester (for example phenyl ester, toluyl ester, naphthyl ester etc.); aroylalkyl ester (for example phenacyl ester etc.); and silylester (for example of trialkylhalogensilyl, dialkyldihalogensilyl, alkyltrihalogensilyl, dialkylarylhalogensilyl, trialkoxyhalogensilyl, dialkylaralkylhalogensilyl, dialkoxydihalogensilyl, trialkoxyhalogensilyl etc.) and the like.

With the above esters the alkane and/or arene part may optionally contain at least one suitable substituent such as halogen, alkoxy, hydroxy, nitro or the like.

$X_{I3}$  to  $X_{VII3}$  and  $X_{I4}$  to  $X_{VII4}$  as well as  $X_{XI3}$  and  $X_{XI4}$ ,  $X_{III}$  and  $X_{II2}$  are preferably a metal from the first, second or third main group of the periodic system, ammonium, substituted ammonium, or ammonium compounds, which derive from ethylene diamine or amino acids. In other words the salt compounds of the ammonium phosphonic acid derivatives with organic or inorganic bases (for example sodium salt, potassium salt, calcium salt, aluminium salt, ammonium salt, magnesium salt, triethylamine salt, ethanolamine salt, dicyclohexylamine salt, ethylenediamine salt, N,N'-dibenzylethylenediamine salt etc.) as well as salts with amino acids (for example arginine salt, aspartic acid salt, glutamic acid salt etc.) and the like.

The compounds according to the invention in accordance with the formulae (I) to (XIV) permit for example the emergence of spatial isomers for groups containing double bonds or chiral groups R or A or B or Y or Z or X. The use of the compounds according to the invention includes all spatial isomers both as pure substances and in form of their mixtures.

Pharmaceutically acceptable salts of the aminohydrophosphonic acid derivative include salts, which form the compounds according to the invention in their protonised form as an ammonium salt of inorganic or organic acids, such as hydrochloric acid, sulfur acid, citric acid, maleic acid, fumaric acid, tartaric acid, p-toluene sulfonic acid.

Salts which are formed by suitable selection of  $X_3$  ( $X_{I3}$  to  $X_{V3}$ ) and  $X_4$  ( $X_{I4}$  to  $X_{V4}$ ) as well as  $X_{III}$  and  $X_{II2}$  are especially suited, such as sodium salt, potassium salt, calcium salt, ammonium salt, ethanolamine salt, triethylamine salt, dicyclohexylamine salt and salts of amino acid such as arginine salt, aspartic acid salt, glutamic acid salt.

The lipid metabolism inhibitors according to the invention contain one or more inhibitors of lipid metabolism. Inhibitors may be used which control the intake of fats as well as inhibitors, which control the synthesis of fats. The inhibitors include anion exchangers, preferably cholestyramine and colestipol,  $\beta$ -sitosterol, nicotinic acids and their derivatives, such as nicotinyalcohol, clofibrate and their derivatives, such as clofibrin acid ethylester, as well as their analogues, such as bezafibrate, fenofibrate and gemfibrozil, and probucol.

The inhibitors, which control the synthesis of fats, include HMG-CoA synthetase inhibitors, HMG-CoA reductase inhibitors, preferably lovastatin, mevastatin, simvastatin, fluvastatin, atorvastatin, pravastatin and cerivastatin, inhibitors the squalene synthetase, preferably pyrophosphate, pyrophosphate derivatives, bisphosphonic acid derivatives, phosphinylmethylphosphonic acid derivatives, phosphinylformyl derivatives, phosphonocarboxyl derivatives, phosphonosulfonic acid derivatives, phosphinylmethylphosphonic acid derivatives, inhibitors of the squalene monooxygenase and other inhibitors of the synthesis of cholesterol.

Inhibitors of the HMG-CoA-reductase and inhibitors of the squalene synthetase are especially preferred.

Out of the bisphosphonates clodronate, etidronate, pamidronate, ibandronate, alendronate, zoledronate, risedronate, tiludronate and cimadronate are especially preferred.

Upon simultaneous, separate or successive administration together with inhibitors of lipid metabolism synthesis the infectious active compounds and their esters as well as their salts show a strong cytotoxic efficacy against unicellular and multicellular parasites, fungi, bacteria and cells infected by viruses. The compounds according to the invention are usable in the treatment of infectious diseases which are caused by parasites, fungi, bacteria or viruses in humans and animals. The compounds are also suitable for the use for preventing these diseases.

The lipid metabolism inhibitors are effective against unicellular parasites (protozoa), in particular against pathogens of malaria and the sleeping sickness as well as the Chagas' disease, the toxoplasmosis, amoebic dysentery, leishmaniasis, trichomoniasis, pneumocystosis, balantidiasis, cryptosporidiasis, sarcocystosis, acanthamebiasis, naegleriasis, coccidiosis, giardiasis and lambliosis.

Therefore, they are particularly suitable as malaria prophylactics and as prophylactics of sleeping sickness as well as the Chagas' disease, toxoplasmosis, amoebic dysentery, leishmaniasis, trichomoniasis, pneumocystosis, balantidiasis, cryptosporidiasis, sarcocystosis, acanthamebiasis, naegleriasis, coccidiosis, giardiasis and lambliosis.

The lipid metabolism inhibitors according to the invention may in particular be used against the following bacteria:

Bacteria of the family Propionibacteriaceae, in particular the genus *Propionibacterium*, in particular the species *Propionibacterium acnes*; bacteria of the family Actinomycetaceae, in particular the genus *Actinomyces*; bacteria of the genus *Corynebacterium*, in particular the species *Corynebacterium diphtheriae* and *Corynebacterium pseudotuberculosis*; bacteria of the family Mycobacteriaceae, the genus *Mycobacterium*, in particular the species *Mycobacterium leprae*, *Mycobacterium tuberculosis*, *Mycobacterium bovis* and *Mycobacterium avium*; bacteria of the family Chlamydiaceae, in particular the species *Chlamydia trachomatis* and *Chlamydia psittaci*; bacteria of the genus *Listeria*, in particular the species *Listeria monocytogenes*; bacteria of the species *Erysipelthrix rhusiopathiae*; bacteria of the genus *Clostridium*; bacteria of the genus *Yersinia*, the species *Yersinia pestis*, *Yersinia pseudotuberculosis*, *Yer-*

sinia enterocolitica and Yersinia ruckeri; bacteria of the family Mycoplasmataceae, the genus Mycoplasma and Ureaplasma, in particular the species Mycoplasma pneumoniae; bacteria of the genus Brucella; bacteria of the genus Bordetella; bacteria of the family Neisseriaceae, in particular the genera Neisseria and Moraxella, in particular the species Neisseria meningitidis, Neisseria gonorrhoeae and Moraxella bovis; bacteria of the family Vibrionaceae, in particular the genera Vibrio, Aeromonas, Plesiomonas and Photobacterium, in particular the species Vibrio cholerae, Vibrio anguillarum and Aeromonas salmonicidas; bacteria of the genus Campylobacter, in particular the species Campylobacter jejuni, Campylobacter coli and Campylobacter fetus; bacteria of the genus Helicobacter, in particular the species Helicobacter pylori; bacteria of the families Spirochaetaceae and the Leptospiraceae, in particular the genus Treponema, Borrelia and Leptospira, in particular Borrelia burgdorferi; bacteria of the genus Actinobacillus; bacteria of the family Legionellaceae, the genus Legionella; bacteria of the family Rickettsiaceae and family Bartonellaceae; bacteria of the genus Nocardia and Rhodococcus; bacteria of the genus Dermatophilus; bacteria of the family Pseudomonadaceae, in particular the genera Pseudomonas and Xanthomonas; bacteria of the family Enterobacteriaceae, in particular the genera Escherichia, Klebsiella, Proteus, Providencia, Salmonella, Seratia and Shigella; bacteria of the family Pasteurellaceae, in particular the genus Haemophilus; bacteria of the family Micrococcaceae, in particular the genus Micrococcus and Staphylococcus; bacteria of the family Streptococcaceae, in particular the genus Streptococcus and Enterococcus and bacteria of the family Bacillaceae, in particular the genus bacillus and clostridium.

Accordingly, the lipid metabolism inhibitors according to the invention are suitable for treatment of diphtheria, acne vulgaris, listeriosis, erysipelas in animals, gas gangrene in humans and in animals, diseases in humans and animals caused by clostridium septicum, tuberculosis in humans and animals, leprosy, and further mycobacteriosis in humans and animals, paratuberculosis in animals, pestis, mesenterial lymphadenitis and pseudotuberculosis in humans and animals, cholera, legionnaires disease, borrelioses in humans and animals, leptospiroses in humans and animals, syphilis, campylobacter enteritides in humans and animals, moraxella keratoconjunctivitis and serositis in animals, brucelloses in animals and in humans, anthrax in humans and animals, actinomycosis in humans and animals, streptotrichosis, psittakosis/ornithosis in animals, and Q-fever and ehrlichiosis.

Further the use is advantageous in helicobacter eradication therapy of ulcers of the gastroenteric tract.

Further combinations with an additional antibiotic may also be used for treatment of the above mentioned diseases. As lipid metabolism inhibitors with other antiinfective agents in particular isoniazide, rifampicin, ethambutol, pyrazinamide, streptomycin, protionamide and

dapson are suitable for the treatment of tuberculosis.

The lipid metabolism inhibitors according to the invention may furthermore be used in particular in infections with following viruses:

Parvoviridae: parvo viruses, dependo viruses, Denso viruses; Adenoviridae: adeno viruses, mastadeno viruses, aviadeno viruses; Papovaviridae: papova viruses, in particular papilloma viruses (so called wart viruses), Polyoma viruses, in particular JC virus, BK virus, and miopapova viruses; herpes viruses: all herpes viruses, in particular herpes simplex viruses, the varizella-zoster viruses, human cytomegalo virus, Epstein-Barr viruses, all human herpes viruses, human herpes virus 6, human herpes virus 7, human herpes virus 8; Poxviridae: pox viruses, orthopox, parapox, molluscum contagiosum virus, avipox viruses, capripox viruses, leporipox viruses; all primary hepatotropic viruses, Hepatitis viruses: hepatitis A viruses, hepatitis B viruses, hepatitis C viruses, hepatitis D viruses, hepatitis E viruses, hepatitis F viruses, hepatitis G viruses; Hepadna viruses: all hepatitis viruses, hepatitis B virus, hepatitis D viruses; Picornaviridae: picorna viruses, all entero viruses, all polio viruses, all coxsackie viruses, all echo viruses, all rhino viruses, hepatitis A virus, aphtho viruses; Calciviridae: hepatitis E viruses; Reoviridae: reo viruses, orbi viruses, rota viruses; Togaviridae: toga viruses, alpha viruses, rubi viruses, pesti viruses, rubella virus; Flaviviridae: flavi viruses, ESME virus, hepatitis-C-Virus; Orthomyxoviridae: all influenza viruses; Paramyxoviridae: paramyxoviruses, morbilli virus, pneumo virus, measles virus, mumps virus; Rhabdoviridae: rhabdoviruses, rabies virus, lyssa virus, viscula stomatitis virus; Corona viridae: corona viruses; Bunyaviridae: bunya viruses, nairo virus, phlebo virus, uuku virus, hanta virus; Arenaviridae: arena viruses, lymphocytic choriomeningitis-virus; Retroviridae: retro viruses, all HTL viruses, human T-cell leukaemia virus, oncornaviruses, spumaviruses, lenti viruses, all HIV-viruses; Filoviridae: Marburg and Ebola virus; Slow-virus-infections, prions; Onco viruses, leukemia viruses.

The preparations used according to the invention are therefore suitable for fighting the following viral infections:

Eradication of papilloma viruses to prevent tumors, in particular tumors in the sexual organs caused by papilloma viruses in humans, eradication of JC viruses and BK viruses, eradication of herpes viruses, eradication of human herpes viruses 8 for the treatment of Kaposi's sarcoma, eradication of cytomegalo viruses before transplants, eradication of Epstein-Barr viruses before transplants and to prevent tumors associated with Epstein-Barr viruses, eradication of hepatitis viruses for the treatment of chronic liver diseases and for the prevention of tumors of the liver and cirrhosis of the liver, eradication of coxsackie viruses patients with cardiomyopathy, eradication of coxsackie viruses in diabetes mellitus patients, eradication of immune system debilitating viruses in humans and animals, treatment of secondary infections in AIDS-patients, treatment of inflammations of viral origin of the respiratory tract (larynx

papillomas, hyperplasias, rhinitis, pharyngitis, bronchitis, pneumonias), of the sensory organs (Keratoconjunctivitis), of the nervous system (poliomyelitis, meningoencephalitis, encephalitis, subacute sclerosing panencephalitis SSPE, progressive multifocal leukoencephalopathy, lymphocytic choriomeningitis), of the gastro-intestinal tract (stomatitis, gingivostomatitis, oesophagitis, gastritis, gastroenteritis, diarrhoea-causing diseases), the liver and the gall bladder system (hepatitis, cholangitis, hepatocellular carcinoma), of the lymphatic tissue (mononucleosis, lymphadenitis), of the haematopoietic system, of the sexual organs (mumps orchitis), of the skin (warts, dermatitis, herpes labialis, heat rash, herpes zoster, shingles), of the mucous membranes (papillomas, conjunctiva papillomas, hyperplasias, dysplasias), of the heart/blood vessel system (arteriitis, myocarditis, endocarditis, pericarditis), the kidney/urinary tract systems, of the sexual organs (anogenital lesions, warts, genital warts, acute condylomas, dysplasias, papillomas, cervix dysplasias, condylomata acuminata, epidermodysplasia verruciformis), of the organs of motion (myositis, myalgia), treatment of foot and mouth diseases in cloven-hoofed animals, of Colorado tick fever, of Dengue-syndrome, of haemorrhagic fever, of early summer meningoencephalitis (FSME) and of yellow fever.

The agents are suited for combination with other agents with antiviral characteristics.

The compounds used according to the invention which generally include pharmaceutically acceptable salts, esters, a salt of such an ester or else compounds which upon application provide the compounds use according to the invention metabolic products or decomposition products, also called "prodrugs" may all be prepared for administration like known anti-infectious agents in any suitable manner (mixed with non-toxic pharmaceutically acceptable carriers).

The combined preparation used according to the invention may be administered together with non-toxic, inert pharmaceutically suitable carriers. These are understood to mean solid, semi-solid or liquid diluents, fillers and formulation auxiliary agents of all kinds.

Tablets, dragees, capsules, pills, granules, suppositories, solutions, suspensions and emulsions, pastes, ointments, gels, creams, lotions, powders and sprays are mentioned as pharmaceutical preparations. Tablets, dragees, capsules, pills and granules may contain in addition to the conventional excipients the active ingredient, such as (a) fillers and diluents, for example starches, lactose, cane sugar, glucose, mannitol and silicic acid, (b) binders, for example carboxymethylcellulose, alginate, gelatine, polyvinylpyrrolidone, (c) moisture-retaining agents, for example glycerol, (d) dispersing agents, for example agar-agar, calcium carbonate and sodium carbonate, (e) solution retarders, for example paraffin and (f) resorption accelerators, for example quaternary ammonium compounds, (g) wetting agents, for example cetyl alcohol, glycerol monostearate, (h) adsorption agents, e.g. kaolin and bentonite and (i) lubricants, for

example talcum, calcium and magnesium stearate and solid polyethylene glycol or mixtures of the substances listed under (a) to (i). The inventive compounds may furthermore be incorporated into other carrier materials for example plastics, (plastics chains for topical therapy), collagen or bone cement.

The tablets, dragees, capsules, pills and granules may be provided with the conventional coatings and casings optionally comprising opaquing agents and may also be put together so that they release the active ingredient or active ingredients only or preferably in a specific part of the intestinal optionally with sustain release, wherein polymer substances and waxes for example may be used as embedding compounds.

The active ingredients may optionally also be present in microencapsulated form with one or more of the above mentioned excipients.

In addition to the active ingredients suppositories may also contain the conventional water soluble or water insoluble excipients, for example polyethylene glycols, fats, for example cocoa fat and higher esters (for example C<sub>14</sub>- alcohol with C<sub>16</sub>-fatty acid) or mixtures of these substances.

In addition to the active ingredients ointments, pastes, creams and gels may contain the conventional excipients, for example animal and vegetable fats, waxes, paraffins, starch, tragacanth, cellulose derivative, polyethylene glycols, silicones, bentonites, silicic acid, Talc and zink oxide or mixtures of these substances.

In addition to the active ingredients powders and sprays may contain the conventional excipients, for example lactose, talcum, silicic acid, aluminium hydroxide, calcium silicate and polyamide powder or mixtures of these substances. Sprays may additionally contain the conventional blowing agents, for example chlorofluorohydrocarbons.

In addition to the active ingredients solutions and emulsions may contain the conventional excipients such as solvents, solubilisers and emulgators, for example water, ethyl alcohol, isopropyl alcohol, ethyl carbonate, ethyl acetate, benzyl alcohol, benzyl benzoate, propylene glycol, 1,3-butyleneglycol, dimethylformamide, oils, in particular cotton seed oil, peanut oil, corn oil, olive oil, castor oil and sesame oil, glycerol, glycerol formal, tetrahydrofurfuryl alcohol, polyethyleneglycols and fatty acid esters of sorbitan or mixtures of these substances.

The solutions and emulsions may also be present in sterile and blood isotonic form for parenteral application.

In addition to the active ingredients suspensions may contain conventional excipients such as liquid diluents, for example water, ethyl alcohol, propylene glycol, suspending agents, for example ethoxylated isostearyl alcohols, polyoxyethylene sorbitol and sorbitan esters, microcrystalline cellulose, aluminium metahydroxide, bentonite, agar-agar and tragacanth or mixtures of these substances.

The active ingredient or the active ingredients of the formulae (I) to (XIV) shall be present in the above mentioned pharmaceutical preparations, preferably in a concentration of approximately 0.1 to 99.5 weight %, preferably of approximately 0.5 to 95 weight % of the total mixture. The ratio of the substances to be individually combined is dependent on the individual active ingredient. Therefore, active agents are present, which are administered in a general dose of 0.1 mg/kg body weight per day (ibandronate and alendronate), 0.5 mg/kg body weight per day (mevastatin, simvastatin, pravastatin, fluvastatin), 10 mg/kg body weight per day (pamidronate).

In addition to the compounds of the formulae (I) to (XIV) and the inhibitors of lipid metabolism the above mentioned pharmaceutical preparations may also contain further pharmaceutical active ingredients, such as antiviral, antiparasitic, antimycotic or antibacterial active agents.

The lipid metabolism inhibitors used according to the invention further may contain sulfonamide, sulfadoxin, artemisinin, atovaquon, chinin, chloroquine, hydroxychloroquin, mefloquin, halofantrin, pyrimethamine, artesin, tetracycline, doxycyclin, proguanil, metronidazol, praziquantil, niclosamide, mebendazol, pyrantel, tiabendazole, diethylcarbazin, piperazin, pyrivinum, metrifonate, oxamniquin, bithionol or suramin or several of these substances.

Preferably lovastatin, atorvastatin, simvastatin, mevastatin, pravastatin and fluvastatin are administered orally, wherein pravastatin and fluvastatin are administered in active form.

In general it has proved advantageous both in human and veterinary medicine to administer the active ingredient or ingredients of formulae (I) and (V) in total quantities of approximately 0.5 to approximately 600, preferably 1 to 200 mg/kg body weight per 24 hours, optionally in the form of several individual doses in order to achieve the desired results. An individual dose contains the active ingredient or ingredients preferably in quantities of approximately 0.5 to approximately 200, in particular 1 to 60 mg/kg body weight. It may, however, be necessary to deviate from the above-mentioned dosages and this is dependent on the nature and the body weight of the patient to be treated, the nature and the severity of the disease, the nature and the method and the application of the pharmaceutical compositions as well as the time scale or interval within the administration takes place.

It has proved advantageous to administer the inhibitors of the lipid metabolism in the known range of dosage, which are known from the treatment of disorders of the lipid metabolism and the calcium and phosphate metabolism. These are total quantities of approximately 0.005 to approximately 200, preferably 0.01 to 100 mg/kg body weight per 24 hours, are optionally administered in the form of several individual doses in order to achieve the desired results. An individual dose contains the active ingredient or ingredients (inhibitors of the lipid metabolism) preferably in quantities of approximately 0.002 to approximately 50, in particular 0.01 to 10 mg/kg body weight. It may however be necessary to deviate from the above-mentioned dosages and this is dependent on the nature and the body weight of the patient to be treated, the nature and the severity of the disease, the nature and the method and the application of the pharmaceutical compositions as well as the time scale or interval within the administration takes place. With amino bisphosphonates it has to be considered that their resorbility is very low. This characteristic is advantageous in the case of an attack in the intestinal tract (for example in the case of amoebic dysentery). Here doses of up to 10 mg/kg body weight pamidronate are administered orally. For injection in general doses up to 2 mg/kg body weight are sufficient.

Thus in some cases it may be sufficient to get by with less than the above mentioned quantity of active ingredient, whilst in other cases the above-stated quantity of active ingredient must be exceeded. The person skilled in the art may determine the optimum dosage and method of application of the active ingredient in each case by virtue of his expert experience.

The lipid metabolism inhibitors according to the invention may be administered in animals in the conventional concentrations and preparations together with the feed or feed preparations or the drinking water.

The lipid metabolism inhibitors may be administered simultaneously, separately or successively.

### **Example**

#### **Preparation anti-infectiously active agents**

##### **Preparation for injection**

(1) The necessary quantity of the sterile anti-infectiously active agents, 500 mg 3-(N-acetyl-N-hydroxy amino)-propyl-phosphonic acid monosodium salt and 90 mg 3-amino-1-hydroxy-propyliden-1,1-bisphosphonic acid disodium salt are distributed on flasks or ampules. The flasks are sealed hermetically for excluding bacteria. For injection it is taken in 500 ml physiologic solution of sodium chloride respectively and administered.

In principle in the same manner as describe above under (1) further injectable preparations of the anti-infectiously active agents are prepared:

(2) 250 mg 3-(N-formyl-N-hydroxy amino)-propylphosphonic acid -monosodium salt and 1 mg 3-methylpentylamino-1-hydroxypropyliden-1,1-bisphosphonic acid disodium salt are used for injections.

(3) 250 mg 3-(N-formyl-N-hydroxy amino)-trans-1-propenylphosphonic acid -monosodium salt and 90 mg 3-amino-1-hydroxypropyliden-1,1-bisphosphonic acid disodium salt are used as an active ingredient for injection.

#### Preparation of tablets:

A suitable tablet formulation is formed by the following mixture:

3-(N-formyl-N-hydroxy amino)- propylphosphonic acid -monosodium salt	200 mg
lovastatin	10 mg
mannitol	400 mg
starch	50 mg
magnesium stearate	10 mg

#### Preparation of capsules

3-(N-formyl-N-hydroxy amino)- propylphosphonic acid monopotassium salt	300 mg
simvastatin	10 mg
magnesium stearate	15 mg

The present ingredients are mixed and then filled into a hard gelatine capsule in usual manner.

### Claims

1. Combined preparation comprising as active ingredients at least one anti-infectiously active compound, which inhibits the 2-C-methylerythrose-4-metabolic pathway, and at least one inhibitor of the lipid metabolism, wherein the inhibitor of the lipid metabolism and the anti-infectiously active compound are not identical.
2. Combined preparation according to claim 1, characterized in that the inhibitors of lipid metabolism are selected from the group which consists of cholestyr amine,  $\beta$ -sitosterol, colestipol, probucol, nicotinic acid, nicotiny alcohol, clofibrin acid derivative and analogues of the clofibrin acid derivative, HMG-CoA-synthetase-inhibitors, HMG-CoA-reductase-inhibitors, squalene synthetase inhibitors and squalene monooxygenase inhibitors.
3. Combined preparation according to claim 2, characterized in that the inhibitors of lipid metabolism are inhibitors of the squalene synthetase, in particular pyrophosphates, pyrophosphate derivatives, bisphosphonic acid derivatives, phosphinylmethyl phosphonic acid derivatives, phosphinylformyl derivatives, phosphonocarboxyl derivatives, phosphonosulfonic acid derivatives, phosphinylmethylphosphonic acid derivatives.
4. Combined preparation according to claim 2, characterized in that the inhibitors of lipid metabolism are inhibitors of the HMG-CoA-reductase, in particular lovastatin, atorvastatin, mevastatin, simvastatin, fluvastatin, pravastatin and cerivastatin.
5. Combined preparation according to claim 2, characterized in that the inhibitors of lipid metabolism are clofibrin acid derivative and their analogues, in particular gemfibrozil, fenofibrate, bezafibrate, clofibrate, ciprofibrate and clonofibrate.
6. Combined preparation according to claim 2, characterized in that the inhibitors of the lipid metabolism are bisphosphonic acid derivative, in particular clodron acid derivatives, etidron acid derivatives, pamidron acid derivatives, in particular pamidronat, ibandron acid derivatives, in particular ibandronate, alendron acid derivatives, in particular alendronate, zoledron acid derivatives, in particular zoledronat, risedron acid derivatives, tiludron acid derivatives and cimadron acid derivatives.
7. Combined preparation according to one of claims 1 to 6, comprising as an active ingredient at least one aminohydrocarbyl phosphonic acid derivative of the general formula (I)

wherein  $R_{I1}$  and  $R_{I2}$  are the same or different and are selected from the group which consists of H, OH, substituted and unsubstituted acyl, substituted and unsubstituted alkyl, substituted and unsubstituted aryl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, and substituted and unsubstituted heterocyclic radical,

$R_{I3}$  and  $R_{I4}$  are selected from the group which consists of substituted and unsubstituted alkyl with 1 to 26 carbon atoms, substituted and unsubstituted hydroxyalkyl with 1 to 26 carbon atoms, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted aralkyl, substituted and unsubstituted alkenyl with 1 to 26 carbon atoms, substituted and unsubstituted alkynyl with 1 to 26 carbon atoms, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, halogen,  $X_{I3}$  and  $X_{I4}$ , wherein  $X_{I3}$  and  $X_{I4}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl with 1 to 26 carbon atoms, substituted and unsubstituted hydroxyalkyl with 1 to 26 carbon atoms, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted alkenyl with 1 to 26 carbon atoms, substituted and unsubstituted alkynyl with 1 to 26 carbon atoms, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, a silyl, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids,, and

$A_I$  represents an alkylene radical, alkenylene radical or hydroxyalkylene radical or corresponds to the following formula (IA):

wherein one or more the carbon atoms, selected from the group  $C_{I3}$ ,  $C_{I4}$ ,  $C_{I5}$ , together with their substituents also may be absent, and at least one present substituent out of  $B_1$  to  $B_{10}$  is a  $C_{3-8}$ -cycloalkyl- $(C_{0-9})$ -alkyl group, wherein the  $C_{3-8}$ -cycloalkyl group as well as the  $C_{0-9}$ -alkyl group may comprise one or more double bonds and one or two carbon atoms of the cycloalkyl group may be replaced by nitrogen, oxygen or sulfur atoms, and wherein the cycloalkyl group as well as the alkyl group may be substituted with hydroxy, halogen, amino, oxo groups, with branched or straight  $C_{1-9}$ -alkyl groups and  $C_{2-9}$ -alkenyl groups, wherein the  $C_{1-9}$ -alkyl groups and  $C_{2-9}$ -alkenyl groups may be substituted with hydrogen, hydroxy, amino, halogen and oxo groups, and the remaining present substituents  $B_{I1}$  to  $B_{I10}$  are selected from

the group which consists of hydrogen, hydroxy-, halogen-, amino groups, C<sub>1-26</sub>-alkyl radicals, C<sub>1-26</sub>-alkoxy radicals, C<sub>1-26</sub>-alkoxy-C<sub>1-26</sub>-alkyl radicals or both substituents a C-Atoms together form an oxo group, wherein each C<sub>1-26</sub>-alkyl radical and each C<sub>1-26</sub>-alkoxy radical may be branched or straight and saturated or unsaturated with one or more double bonds and may be substituted with hydroxy, amino, halogen and oxo groups.

8. Combined preparation according to one of the claims 1 to 6, comprising as an active ingredient at least one bisphosphonic acid according the general formula

wherein X<sub>III</sub>, X<sub>II2</sub>, X<sub>III3</sub>, X<sub>III4</sub>, which are the same or different, are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, metals of the 1., 2. and 3. main group of the periodic systems, such as Na, K, Ca, Mg, Al as well as substituted and unsubstituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids,

A<sub>II</sub> which also may be absent is selected from the group which consists of alkylene, alkenylene and hydroxyalkylene,

R<sub>III</sub>, R<sub>II2</sub>, which are the same or different, are selected from the group which consists of H, OH, -NH<sub>2</sub>, substituted and unsubstituted acyl, substituted and unsubstituted alkyl, substituted and unsubstituted aryl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical and -SR<sub>III3</sub>, Cl and -NR<sub>III3</sub>R<sub>III4</sub>, wherein

R<sub>III3</sub>, R<sub>III4</sub>, which are the same or different, are selected from the group which consists of H, OH, substituted and unsubstituted acyl, substituted and unsubstituted alkyl, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted cycloalkyl and substituted and unsubstituted heterocyclic radical, or their pharmaceutically acceptable salts, esters as well as salts of esters or compounds, which upon application provide the compounds to be administered as metabolic products or decomposition products.

9. Combined preparation according to one of claims 1 to 6, comprising as an active ingredient at least one compound of the general formula (III):

wherein  $\text{R}_{\text{III1}}$  is selected from the group which consists of H, substituted and unsubstituted acyl, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical, halogen and  $\text{OX}_{\text{III1}}$ , wherein  $\text{X}_{\text{III1}}$  is selected from the group which consists of hydrogen, substituted and unsubstituted acyl, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, a silyl, substituted and unsubstituted heterocyclic radical, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds,

$\text{R}_{\text{III4}}$  and  $\text{R}_{\text{III3}}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted acyl, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical, halogen and  $\text{OX}_{\text{III4}}$  and  $\text{OX}_{\text{III3}}$ , wherein  $\text{X}_{\text{III4}}$  and  $\text{X}_{\text{III3}}$  are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted cycloalkyl, a silyl, substituted and unsubstituted heterocyclic radical, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids,, and

$\text{A}_{\text{III1}}$  and  $\text{A}_{\text{III2}}$ , out of which one or both may be absent, are the same or different and represent a alkylene radical, alkenylene radical, an oxo radical, a hydroxy radical or oxo hydroxyalkylene radical.

10. Combined preparation according to one of the claims 1 to 6, comprising as an active ingredient at least one compound the general formula (IV):

in which  $R_{IV1}$  and  $R_{IV2}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical, halogen,  $OX_{IV1}$  and  $OX_{IV2}$ ,

wherein  $X_{IV1}$  and  $X_{IV2}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical,

$B_{IV}$  selected from the group which consists of the ether group (IVA)

wherein  $A_{IV1}$  and  $A_{IV2}$ , out of which  $A_{IV2}$  also may be absent, are the same or different and are selected from the group which consists of alkylene radical, alkenylene radical and hydroxyalkylene radical,

the keto group (IVB)

wherein  $A_{IV3}$  and  $A_{IV4}$ , out of which one or both also may be absent, are the same or different, are selected from the group which consists of alkylene radical, alkenylene radical and hydroxyalkylene radical,

and 5 and 6 membered cyclic, in particular heterocyclic compounds, which contain beside carbon at least one heteroatom as a ring member, wherein the heteroatom is selected from the group which consists of oxygen and nitrogen,

$R_{IV3}$  and  $R_{IV4}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl having up to 26 carbon atoms, substituted and unsubstituted hydroxyalkyl having up to 26 carbon atoms, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted aralkyl, substituted and unsubstituted alkenyl having up to 26 carbon atoms, substituted and unsubstituted alkynyl having up to 26 carbon atoms, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, halogen,  $OX_{IV3}$  or  $OX_{IV4}$ , wherein  $X_{IV3}$  or  $X_{IV4}$  are the same or

different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl having up to 26 carbon atoms, substituted and unsubstituted hydroxyalkyl having up to 26 carbon atoms, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted alkenyl having up to 26 carbon atoms, substituted and unsubstituted alkynyl having up to 26 carbon atoms, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, a Silyl, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids, and their pharmaceutically acceptable salts, esters and amides and salts of esters.

11. Combined preparation according to one of the claims 1 to 6, comprising as an active ingredient at least one phosphonic acid derivative of the general formula (V):

wherein  $\text{A}_{V1}$  and  $\text{A}_{V2}$ , out of which one or both may also be absent, are the same or different and are selected from the group which consists of an alkylene radical, an alkenylene radical and a hydroxyalkylene radical, and preferably the carbon chain  $-\text{A}_{V1}-\text{CHOH}-\text{A}_{V2}-$  consists of 2 to 5 carbon atoms, particularly preferably of 3-4 carbon atoms,

$\text{B}_V$  is selected from the group which consists of a radical of the formula (VA)

wherein  $\text{R}_{V1}$  is selected from the group which consists of hydrogen, OH, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical and halogen, a radical of the formula (VB)

wherein  $R_{V2}$ ,  $R_{V3}$  and  $R_{V4}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical, halogen, and a radical of the formula (VC)

wherein  $R_{V5}$ ,  $R_{V6}$  and  $R_{V7}$  are the same or different and are selected from the group which consists of hydrogen, OH, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical, halogen,

wherein  $X_{V3}$  or  $X_{V4}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, a silyl, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids,, and their pharmaceutically acceptable salts, esters and amides and salts of esters.

12. Combined preparation according to one of the claims 1 to 6, comprising as an active ingredient at least one compound of the general formula (VI):

wherein  $R_{VI3}$  and  $R_{VI4}$  are the same or different and are selected from the group which con-

sists of hydrogen, substituted and unsubstituted alkyl having up to 26 carbon atoms, substituted and unsubstituted hydroxyalkyl having up to 26 carbon atoms, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted aralkyl, substituted and unsubstituted alkenyl having up to 26 carbon atoms, substituted and unsubstituted alkynyl having up to 26 carbon atoms, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, halogen,  $OX_{VI3}$  or  $OX_{VI4}$ ,

wherein  $X_{VI3}$  or  $X_{VI4}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl having up to 26 carbon atoms, substituted and unsubstituted hydroxyalkyl having up to 26 carbon atoms, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted alkenyl having up to 26 carbon atoms, substituted and unsubstituted alkynyl having up to 26 carbon atoms, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, a silyl, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids,

and  $B_{VI}$  is selected from the group which consists of the group (VIA)

and the group (VIB)

wherein  $A_{VI}$  is selected from the group which consists of an alkyleneamine radical, an alkenyleneamine radical, a hydroxyalkyleneamine radical, an alkyleneimine radical, an alkenyleneimine radical and a hydroxyalkyleneimine radical, wherein the nitrogen atom is a member of the chain, which connects the phosphorus atom with the nitrogen atom of the group

wherein  $R_{VI1}$  and  $R_{VI2}$  in group (VIA) are the same or different and  $R_{VI1}$  and  $R_{VI2}$  in group (VIA) and  $R_{VI1}$  in group (VIB) are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and

unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical, halogen,  $\text{OX}_{\text{VII}}$  and  $\text{OX}_{\text{VII2}}$ , wherein  $\text{X}_{\text{VII}}$  and  $\text{X}_{\text{VII2}}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl, substituted and unsubstituted hydroxyalkyl, substituted and unsubstituted alkenyl, substituted and unsubstituted alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical, or their pharmaceutically acceptable salts, esters and amides and salts of esters.

13. Combined preparation according to one of the claims 1 to 6, comprising as an active ingredient at least one compound the general formula (VII):

in which  $\text{A}_{\text{VII}}$  selected from the group which consists of a  $(\text{C}_{1-9})$ -alkylene radical, which may contain one or more double bonds and may be substituted with hydroxy, halogen, amino, oxo groups, with branched or straight  $\text{C}_{1-9}$ -alkyl groups and  $\text{C}_{2-9}$ -alkenyl- groups, wherein the  $\text{C}_{1-9}$ -alkyl groups and  $\text{C}_{2-9}$ -alkenyl groups may be substituted with hydrogen, hydroxy, amino, halogen and oxo groups,  $-\text{C}-\text{O}-\text{C}-$  and  $-\text{C}-\text{N}-\text{C}-$ , wherein the carbon atoms of  $-\text{C}-\text{O}-\text{C}-$  and  $-\text{C}-\text{N}-\text{C}-$  may be substituted with an alkyl having up to 7 carbon atoms or hydroxy groups, or in which  $\text{A}_{\text{VII}}$  corresponds to the following formula (VIIA):

wherein one or more carbon atoms, selected from the group  $\text{C}_{\text{VII3}}$ ,  $\text{C}_{\text{VII4}}$ ,  $\text{C}_{\text{VII5}}$ , together with their substituents may be absent, and at least one present substitute of  $\text{B}_{\text{VII1}}$  to  $\text{B}_{\text{VII10}}$  is a  $\text{C}_{3-8}$ -cycloalkyl- $(\text{C}_{0-9})$ -alkyl group, wherein the  $\text{C}_{3-8}$ -cycloalkyl group as well as the  $\text{C}_{0-9}$ -alkyl group may comprise one or more double bonds and one or two carbon atoms of the cycloalkyl group may be replaced by nitrogen, oxygen or sulfur atoms, and wherein the cycloalkyl group as well as the alkyl group may be substituted with hydroxy, halogen, amino, oxo groups with branched or straight  $\text{C}_{1-9}$ -alkyl groups and  $\text{C}_{2-9}$ -alkenyl groups, wherein the  $\text{C}_{1-9}$ -alkyl groups and  $\text{C}_{2-9}$ -alkenyl groups may be substituted with hydrogen, hydroxy, amino, halogen and oxo groups, and the remaining present substituents  $\text{B}_{\text{VII1}}$  to  $\text{B}_{\text{VII10}}$  are selected from the group which consists of hydrogen, hydroxy, halogen, amino groups,  $\text{C}_{1-26}$ -alkyl radicals,  $\text{C}_{1-26}$ -alkoxy radicals,  $\text{C}_{1-26}$ -alkoxy- $\text{C}_{1-26}$ -alkyl radicals or both substituents of one C-atom together

form an oxo group, wherein each C<sub>1-26</sub>-alkyl radical and each C<sub>1-26</sub>-alkoxy radical is branched or straight and saturated or unsaturated with one or more double bonds and may be substituted with hydroxy, amino, halogen and oxo groups,

wherein R<sub>VIII</sub> selected from the group which consists of 5 and 6 membered heterocycles with one or two nitrogen, oxygen or sulfur atoms in the ring, wherein the heterocycle may be saturated or unsaturated with one or more double or triple bond and may be substituted with hydroxy, halogen, amino, oxo groups and with branched or straight C<sub>1-9</sub>-alkyl groups and C<sub>2-9</sub>-alkenyl groups, wherein the C<sub>1-9</sub>-alkyl groups and C<sub>2-9</sub>-alkenyl groups may be saturated or unsaturated with one or more double or triple bonds and may be substituted with hydrogen, hydroxy, amino, halogen and oxo groups,

wherein R<sub>VII3</sub> and R<sub>VII4</sub> are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted C<sub>1-26</sub>-alkyl, hydroxy-C<sub>1-26</sub>-alkyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted aralkyl, substituted and unsubstituted C<sub>1-26</sub>-alkenyl, substituted and unsubstituted C<sub>1-26</sub>-alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, halogen, OX<sub>VII3</sub> and OX<sub>VII4</sub>,

wherein X<sub>VII3</sub> and X<sub>VII4</sub> are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted C<sub>1-26</sub>-alkyl, substituted and unsubstituted hydroxy-C<sub>1-26</sub>-alkyl, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted C<sub>1-26</sub>-alkenyl, substituted and unsubstituted C<sub>1-26</sub>-alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, a silyl, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids, and their pharmaceutically acceptable salts, esters and amides and salts of esters.

14. Combined preparation according to one of the claims 1 to 6, comprising as an active ingredient at least one compound of the general formula (VIII):

wherein the wavy line represents a bond, which either has  $\alpha$ - or  $\beta$ -configuration, n is 0 or 1,

wherein  $R_{VIII1}$  is selected from the group which consists of substituted and unsubstituted  $C_{1-26}$ -alkyl, hydroxy- $C_{1-26}$ -alkyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted aralkyl, substituted and unsubstituted  $C_{1-26}$ -alkenyl, substituted and unsubstituted  $C_{1-26}$ -alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, halogen and  $OX_{VIII1}$ ,

wherein  $X_{VIII1}$  is selected from the group which consists of hydrogen, substituted and unsubstituted  $C_{1-26}$ -alkyl, substituted and unsubstituted hydroxy- $C_{1-26}$ -alkyl, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted  $C_{1-26}$ -alkenyl, substituted and unsubstituted  $C_{1-26}$ -alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, a silyl, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids,,

$R_{VIII1}$  is selected from the group which consists of  $C_{1-24}$ -alkyl radicals,

$C_{2-24}$ -alkenyl radicals,  $C_{2-24}$ -alkapolyenyl radicals containing 2 to 6 double bonds,  $C_{2-24}$ -alkynyl radicals,  $C_{3-8}$ -cycloalkyl radicals,  $C_{3-8}$ -cycloalkyl- $C_{1-24}$ -alkyl radicals and  $C_{1-12}$ -alkoxy- $C_{1-12}$ -alkyl radicals,

$R_{VIII2}$ ,  $R_{VIII3}$  and  $R_{VIII4}$  each are selected independently from the group which consists of hydrogen, halogen, amino, acetylamino, azido and  $XR_{VIII6}$ -groups, wherein X is O or S and

$R_{VIII6}$  is selected from the group which consists of a hydrogen radical, branched or straight  $C_{1-4}$ -alkyl radicals and  $C_{2-4}$ -alkenyl radicals, wherein the  $C_{1-4}$ -alkyl radicals as well as the  $C_{2-4}$ -alkenyl radicals may be optionally substituted with hydrogen, amino, halogen or oxo groups, or

$R_{VIII2}$ ,  $R_{VIII3}$  and  $R_{VIII4}$  together with the respective geminal hydrogen group represent an oxo group,

$R_{VIII5}$  selected from the group which consists of hydrogen,  $C_{1-24}$ -alkyl groups,  $C_{3-8}$ -cycloalkyl radicals,  $Ar(C_{1-24}$ -alkyl) groups, aryl groups, Acyl groups, heterocyclic radicals, halogen, wherein all radicals may be branched or straight and may be optionally be substituted with hydroxy, amino, halogen or oxo group and may contain 2 to 6 double and triple bonds or

$R_{VIII5}$  is a phenyl radical the formula VIIIA or XIIB,

(VIIIA)

wherein  $R_{VIII7}$  and  $R_{VIII8}$  are the same or different and are bound to any two positions of the phenyl ring and each are selected independently from the group which consists of hydrogen, halogen,  $C_{1-4}$ -alkyl radicals,  $C_{1-4}$ -alkoxy radicals, formyl, acetyl, propionyl, butyryl radicals, formyl, acetyl, propionyl, butyryloxy radicals,  $C_{2-5}$ -alkoxycarbonyl radicals, which all may be branched or straight, or  $R_7$  and  $R_{VIII8}$  may form together a straight saturated alkylene chain with 3 to 4 carbon atoms, which are bound to adjacent positions, for example the 2,3-positions or the 3,4-positions of the phenyl ring, or  $R_7$  and  $R_8$  together form a methylenedioxy radical, a 1,1-ethylenedioxy radical or a 1,2-ethylenedioxy radical, which is bound to the 2,3- or 3,4-positions of the phenyl ring, or

$R_{VIII5}$  is selected from the group which consists of  $R_{VIII9}COOCHR_{VIII10}-$  and  $R_{VIII9}OCOCHR_{VIII10}-$ ,

wherein  $R_{VIII9}$  is selected from the group which consists of  $C_{1-6}$ -alkyl radicals,  $C_{2-6}$ -alkenyl radicals,  $C_{2-6}$ -alkynyl radicals,  $C_{3-8}$ -cycloalkyl radicals,  $C_{3-8}$ -cycloalkyl- $C_{1-6}$ -alkyl radicals and  $C_{1-6}$ -alkoxy- $C_{1-6}$ -alkyl radicals, wherein all radicals may be branched or straight and may be optionally substituted with hydroxy, amino, halogen or oxo groups, and

$R_{10}$  is a branched or straight  $C_{1-4}$ -alkyl radical,

and wherein the configurations of the substituents  $R_{VIII2}$ ,  $R_{VIII3}$ ,  $R_{VIII4}$  and

$R_{VIII5}OOCPO(OH)OCH_2-$  in (VIII) is independently selected from D-gluco, L-gluco, D-galacto, L-galacto, D-manno, L-manno, D-talo, L-talo, D-allo, L-allo, D-altro, L-altro, D-gulo, L-gulo, D-ido or L-ido are, if n is 1 or the configurations of the substituents  $R_2$ ,  $R_3$  and  $R_5OOCPO(OH)OCH_2-$  in I are independently D-ribo, L-ribo, D-arabino, L-arabino, D-xylo, L-xylo, D-lyxo or L-lyxo, if n is 0.

15. Combined preparation according to one of the claims 1 to 6, comprising as an active ingredient at least one compound the general formula (IX)

wherein  $R_{IX11}$  is selected from the group which consists of substituted and unsubstituted  $C_{1-26}$ -alkyl, hydroxy- $C_{1-26}$ -alkyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted aralkyl, substituted and unsubstituted  $C_{1-26}$ -alkenyl, substituted and unsubstituted  $C_{1-26}$ -alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, halogen and  $OX_{IX11}$ ,

wherein  $X_{IX11}$  is selected from the group which consists of hydrogen, substituted and unsubstituted  $C_{1-26}$ -alkyl, substituted and unsubstituted hydroxy- $C_{1-26}$ -alkyl, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted  $C_{1-26}$ -alkenyl, substituted and unsubstituted  $C_{1-26}$ -alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, a silyl, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids,,

wherein  $R_{IX1}$  and  $R_{IX2}$  each are selected independently from the group which consists of  $C_{1-24}$ -alkyl radicals,  $C_{3-8}$ -cycloalkyl radicals,  $C_{3-8}$ -cycloalkyl- $C_{1-24}$ -alkyl radicals,  $C_{1-24}$ -alkoxy radicals,  $C_{1-24}$ -alkylthio- radicals,  $C_{1-24}$ -alkoxy- $C_{1-24}$ -alkyl radicals and  $C_{1-24}$ -alkylthio- $C_{1-24}$ -alkyl radicals, acyl radicals, aryl radicals, aralkyl radicals, heterocyclic radicals, halogen and hydrogen, and each  $C_{1-24}$ -alkyl radical and  $C_{1-24}$ -alkoxy radical may be branched or straight and saturated or unsaturated with 2 to 6 double bonds and optionally may be substituted with hydroxy, amino, mercapto, halogen, oxo groups or  $C_{1-24}$ -alkoxy radicals,  $C_{1-24}$ -alkylcarbonyloxy radicals,  $C_{1-24}$ -alkoxycarbonyloxy radicals,  $C_{1-24}$ -alkylthio radicals,  $C_{1-24}$ -alkylcarbonylthio radicals,  $C_{1-24}$ -alkylamino radicals, di- $(C_{1-24}$ -alkyl)amino radicals,  $C_{1-24}$ -alkylcarbonylamino radicals,  $C_{1-24}$ -alkyl- $(C_{1-24}$ -alkylcarbonyl)amino radicals,  $C_{1-24}$ -alkoxycarbonylamino radicals or  $C_{1-24}$ -alkyl- $(C_{1-24}$ -alkoxycarbonyl)amino radicals, wherein each aralkyl radical, heterocyclic radical,  $C_{1-24}$ -alkyl radical and  $C_{1-24}$ -alkoxy radical may be branched or straight and saturated or unsaturated with 2 to 6 double bonds or triple bonds, or wherein  $R_{IX1}-CH-CH-R_{IX2}$  form a part a  $C_{4-8}$ -carbon ring, which optionally may be substituted with hydroxy, mercapto, amino, halogen, oxo groups or with  $C_{1-24}$ -alkyl radicals,  $C_{1-24}$ -alkoxy radicals,  $C_{1-24}$ -alkylthio radicals,  $C_{1-24}$ -alkylamino radicals, Di- $(C_{1-24}$ -alkyl)amino- radicals,  $C_{1-24}$ -alkylcarbonyl radicals,  $C_{1-24}$ -alkylcarbonyloxy radicals,  $C_{1-24}$ -alkoxycarbonyl radicals,  $C_{1-24}$ -alkylcarbonylthio radicals or  $C_{1-24}$ -alkylcarbonylamino radicals,  $C_{1-24}$ -alkyl- $(C_{1-24}$ -

alkylcarbonyl)-amino radicals, wherein each  $C_{1-24}$ -alkyl radical may be branched or straight and saturated or unsaturated with 1 to 6 double bonds, or wherein  $R_{IX10}$  is a branched or straight  $C_{1-4}$ -alkyl radical, and wherein  $R_{IX1}$ -CH-CH- $R_{IX2}$  form a part of the furanose or pyranose ring of a sugar, e.g. D-ribose, D-arabinose, D-xylose, D-lyxose, D-glucose, D-galactose, D-mannose, D-talose, D-allose, D-altrose, D-gulose, D-idose or the respective L-isomers, wherein the hydroxy groups each optionally may be substituted with hydrogen, amino, azido, oxo, mercapto radicals or  $C_{1-24}$ -alkoxy radicals,  $C_{1-24}$ -alkylthio radicals,  $C_{1-24}$ -alkylamino radicals, di- $(C_{1-24}$ -alkyl)amino radicals,  $C_{1-24}$ -alkylcarbonyloxy radicals,  $C_{1-24}$ -alkylcarbonylthio radicals,  $C_{1-24}$ -alkylcarbonylamino radicals,  $C_{1-24}$ -alkyl- $(C_{1-24}$ -alkylcarbonyl)amino radicals, wherein each  $C_{1-24}$ -alkyl radical may be branched or straight and saturated or unsaturated with 1 to 6 double bonds, and their pharmaceutically acceptable salts, esters and amides and salts of esters as well as their optical isomers.

$R_{IX1}$  and  $R_{IX2}$  each in particular may be selected independently from the group which consists of carboxyl radicals, carboxamido radicals, aryl radicals, aryloxycarbonyl radicals, aryl- $C_{1-24}$ -alkyl radicals,  $C_{1-24}$ -alkoxycarbonyloxy radicals,  $C_{1-24}$ -alkylaminocarbonyl radicals, di- $(C_{1-24}$ -alkyl)-aminocarbonyl radicals, aryl- $C_{1-24}$ -alkoxycarbonyl radicals, aryl- $C_{1-24}$ -alkylaminocarbonyl radicals,  $C_{1-24}$ -alkylcarbonyloxy- $(C_{1-4})$ alkylmethoxycarbonyl radicals,  $C_{1-24}$ -alkoxy-carbonyloxymethoxycarbonyl radicals,  $C_{1-24}$ -alkoxycarbonyl-oxy- $(C_{1-4}$ -alkyl)-methoxycarbonyl, wherein each  $C_{1-24}$ -alkyl radical may be branched or straight and saturated or unsaturated with 2 to 6 double bonds, and each  $C_{1-4}$ -alkyl radical and  $C_{1-24}$ -alkoxy radical may be branched or straight and saturated or unsaturated, and each aryl radical of the formula IXA

(IXA)

wherein  $R_{IX3}$  and  $R_{IX4}$  are the same or different and each are selected from the group which consists of hydrogen, halogen,  $C_{1-4}$ -alkyl radicals,  $C_{1-4}$ -alkoxy radicals, formyl, acetyl, propionyl, butyryl radicals, formyl, acetyl, propionyl, butyryloxy radicals,  $C_{1-4}$ -alkoxycarbonyl radicals, which all may be branched or straight, or  $R_{IX3}$  and  $R_{IX4}$  together form a straight saturated alkylene chain with 3 to 4 carbon atoms, which are bound to adjacent positions of the phenyl ring or  $R_{IX3}$  and  $R_{IX4}$  together form a methylenedioxy radical, a 1,1-ethylenedioxy radical or a 1,2-ethylenedioxy radical, which is bound to adjacent positions of the phenyl ring.

16. Combined preparation according to one of the claims 1 to 6, comprising as an active ingredient at least one compound of the general formula (X):

wherein  $\text{R}_{\text{X}1}$  is selected from the group which consists of hydrogen, substituted and unsubstituted  $\text{C}_{1-9}$ -alkyl, substituted and unsubstituted hydroxy- $\text{C}_{1-9}$ -alkyl, substituted and unsubstituted  $\text{C}_{1-9}$ -alkenyl, substituted and unsubstituted  $\text{C}_{1-9}$ -alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical, halogen and  $\text{OX}_{\text{X}1}$ ,

wherein  $\text{X}_{\text{X}1}$  selected from the group which consists of hydrogen, substituted and unsubstituted  $\text{C}_{1-9}$ -alkyl, substituted and unsubstituted hydroxy- $\text{C}_{1-9}$ -alkyl, substituted and unsubstituted  $\text{C}_{1-9}$ -alkenyl, substituted and unsubstituted  $\text{C}_{1-9}$ -alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical,

wherein  $\text{R}_{\text{X}2}$  is selected from the group which consists of  $\text{C}_{1-26}$ -alkyl radicals,  $\text{C}_{1-26}$ -alkoxy radicals,  $\text{C}_{1-26}$ -alkoxy- $\text{C}_{1-26}$ -alkyl- radicals,  $\text{C}_{3-8}$ -cycloalkyl- $(\text{C}_{0-26})$ -alkyl radicals, wherein one or two carbon atoms of the cycloalkyl group may be replaced by nitrogen, oxygen or sulfur atoms, each  $\text{C}_{3-26}$ -alkyl radical and each  $\text{C}_{3-26}$ -alkoxy radical branched or straight and each  $\text{C}_{3-8}$ -cycloalkyl radical, each  $\text{C}_{2-26}$ -alkyl radical and each  $\text{C}_{2-26}$ -alkoxy radical may be saturated or unsaturated with one or more double bonds and each  $\text{C}_{3-8}$ -cycloalkyl- radical, each  $\text{C}_{1-26}$ -alkyl radical and each  $\text{C}_{1-26}$ -alkoxy radical may be substituted with hydroxy, amino, halogen and oxo groups or by the carbyl group  $\text{COR}_{\text{X}3}$ ,

wherein  $\text{R}_{\text{X}3}$  is selected from the group which consists of substituted and unsubstituted  $\text{C}_{1-26}$ -alkyl, hydroxy- $\text{C}_{1-26}$ -alkyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted aralkyl, substituted and unsubstituted  $\text{C}_{1-26}$ -alkenyl, substituted and unsubstituted  $\text{C}_{1-26}$ -alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, halogen and  $\text{OX}_{\text{X}3}$ ,

wherein  $\text{X}_{\text{X}3}$  are selected from the group which consists of hydrogen, substituted and unsubstituted  $\text{C}_{1-26}$ -alkyl, substituted and unsubstituted hydroxy- $\text{C}_{1-26}$ -alkyl, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl, substituted and unsubstituted  $\text{C}_{1-26}$ -alkenyl, substituted and unsubstituted  $\text{C}_{1-26}$ -alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, a silyl, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids.

17. Combined preparation according to one of the claims 1 to 6, comprising as an active ingredient at least one compound of the general formula (XI):

wherein  $\text{Z}_{\text{XI}}$  is a phosphorus atom or a sulfur atom,

in which  $\text{A}_{\text{XI}}$  is a straight  $\text{C}_{2-9}$ -alkylene chain with substituents which are the same or different and are selected from the group which consists of hydrogen, hydroxy, halogen, amino and oxo groups,  $\text{C}_{1-26}$ -alkyl radicals,  $\text{C}_{1-26}$ -alkoxy radicals,  $\text{C}_{1-26}$ -alkoxy- $\text{C}_{1-26}$ -alkyl radicals or  $\text{C}_{3-8}$ -cycloalkyl- $(\text{C}_{0-9})$ -alkyl radicals, wherein each  $\text{C}_{1-26}$ -alkyl radical and each  $\text{C}_{1-26}$ -alkoxy radical may be branched or straight and saturated or unsaturated with one or more double bonds and may be substituted with hydroxy, amino, halogen and oxo groups and the  $\text{C}_{3-8}$ -cycloalkyl group as well as the  $\text{C}_{0-9}$ -alkyl group of the  $\text{C}_{3-8}$ -cycloalkyl- $(\text{C}_{0-9})$ -alkyl group may contain one or more double bonds and one or two carbon atoms of the cycloalkyl group may be replaced by nitrogen, oxygen or sulfur atoms, and wherein the cycloalkyl group as well as the alkyl group may be substituted with hydroxy, halogen, amino, oxo groups, with branched or straight  $\text{C}_{1-9}$ -alkyl groups and  $\text{C}_{2-9}$ -alkenyl groups wherein the  $\text{C}_{1-9}$ -alkyl groups and  $\text{C}_{2-9}$ -alkenyl groups may be substituted with hydrogen, hydroxy, amino, halogen and oxo groups, in which  $\text{R}_{\text{XI1}}$  and  $\text{R}_{\text{XI2}}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted  $\text{C}_{1-9}$ -alkyl, substituted and unsubstituted hydroxy- $\text{C}_{1-9}$ -alkyl, substituted and unsubstituted  $\text{C}_{1-9}$ -alkenyl, substituted and unsubstituted  $\text{C}_{1-9}$ -alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical, halogen,  $\text{OX}_{\text{XI1}}$  and  $\text{OX}_{\text{XI2}}$ , wherein  $\text{X}_{\text{XI1}}$  and  $\text{X}_{\text{XI2}}$  are the same or different and selected from the group which consists of hydrogen, substituted and unsubstituted  $\text{C}_{1-9}$ -alkyl, substituted and unsubstituted hydroxy- $\text{C}_{1-9}$ -alkyl, substituted and unsubstituted  $\text{C}_{1-9}$ -alkenyl, substituted and unsubstituted  $\text{C}_{1-9}$ -alkynyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted aralkyl, substituted and unsubstituted heterocyclic radical,

in the  $\text{R}_{\text{XI3}}$  and  $\text{R}_{\text{XI4}}$  are the same or different and are selected from the group which consists of substituted and unsubstituted  $\text{C}_{1-26}$ -alkyl, hydroxy- $\text{C}_{1-26}$ -alkyl, substituted and unsubstituted aryl, substituted and unsubstituted acyl, substituted and unsubstituted aralkyl, substituted and unsubstituted  $\text{C}_{1-26}$ -alkenyl, substituted and unsubstituted  $\text{C}_{1-26}$ -alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, halogen,  $\text{OX}_{\text{XI3}}$  and  $\text{OX}_{\text{XI4}}$ , wherein  $\text{X}_{\text{XI3}}$  and  $\text{X}_{\text{XI4}}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted  $\text{C}_{1-26}$ -alkyl, substituted and unsubstituted hydroxy- $\text{C}_{1-26}$ -alkyl, substituted and unsubstituted aryl, substituted and unsubstituted aralkyl,

substituted and unsubstituted C<sub>1-26</sub>-alkenyl, substituted and unsubstituted C<sub>1-26</sub>-alkynyl, substituted and unsubstituted cycloalkyl, substituted and unsubstituted heterocyclic radical, a silyl, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids, and their pharmaceutically acceptable salts, esters and amides and salts of esters.

18. Combined preparation according to one of the claims 1 to 6, comprising as an active ingredient at least one compound the general formula (XII):

wherein A<sub>XII</sub> is selected from the group which consists of hydrogen, substituted and unsubstituted C<sub>1-28</sub>-alkyl radicals, substituted and unsubstituted alkoxy-(C<sub>0-28</sub>)-alkyl radicals, substituted and unsubstituted cycloalkyl-(C<sub>0-28</sub>)-alkyl radicals, substituted and unsubstituted cycloalkoxy-(C<sub>0-28</sub>)-alkyl radicals, substituted and unsubstituted amino-(C<sub>0-28</sub>)-alkyl radicals and substituted, unsubstituted thio-(C<sub>0-28</sub>)-alkyl radicals and substituted or unsubstituted Acyl-(C<sub>0-28</sub>)-alkyl radicals and halogen, wherein each alkyl radical, each alkoxy radical and each acyl radical may be branched or straight and each alkyl radical, each alkoxy radical, each acyl radical and each cycloalkyl group may be saturated or unsaturated with one or more double or triple bonds and one or two carbon atoms the cycloalkyl radicals may be replaced by nitrogen, oxygen or sulfur atoms,

R<sub>XII3</sub> selected from the group which consists of hydrogen, substituted and unsubstituted alkyl groups, substituted and unsubstituted alkoxy-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted C<sub>3-14</sub>-cycloalkyl-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted cycloalkoxy-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted amino-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted silyl-(C<sub>0-26</sub>)-alkyl radicals and substituted and unsubstituted thio-(C<sub>0-26</sub>)-alkyl groups, wherein each alkyl radical and each alkoxy radical may be branched or straight and each alkyl radical, each alkoxy radical and each cycloalkyl group may be saturated or unsaturated with one or more double or triple bonds and one or two carbon atoms of the cycloalkyl radicals may be replaced by nitrogen, oxygen or sulfur atoms,

or a carbon chain of two C-atoms in A<sub>XII</sub> forms a ring together with R<sub>XII3</sub> such that an isoxazolidone ring is formed, and

R<sub>XII4</sub> is selected from the group which consists of hydrogen, substituted and unsubstituted alkyl radicals, substituted and unsubstituted acyl radicals and substituted and unsubstituted cycloalkyl-(C<sub>0-26</sub>)-alkyl radicals, wherein each alkyl radical and each acyl radical may be branched or straight and each alkyl radical, each acyl radical and each cycloalkyl group may be saturated or unsaturated with one or more double or triple bonds and one or two carbon

atoms of the cycloalkyl radicals may be replaced by nitrogen, oxygen or sulfur atoms.

19. Combined preparation according to one of the claims 1 to 6, comprising as an active ingredient at least one compound the general formula (XIII) :

wherein n is an integer from 0 to 4, and

wherein  $R_{XIII1}$ ,  $R_{XIII2}$ ,  $R_{XIII3}$ ,  $R_{XIII4}$ ,  $R_{XIII5}$  and  $R_{XIII6}$  are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl radicals, substituted and unsubstituted alkoxy radicals, substituted and unsubstituted acyl radicals, substituted or unsubstituted cycloalkyl-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted cycloalkyl-(C<sub>0-26</sub>)-alkoxy radicals and halogen, wherein each alkyl radical, each alkoxy radical and each acyl radical may be branched or straight and each alkyl radical, each acyl radical, each alkoxy radical and each cyclo-(C<sub>0-26</sub>)-alkyl group may be saturated or unsaturated with one or more double or triple bonds and one or two carbon atoms of the cycloalkyl radicals may be replaced by nitrogen, oxygen or sulfur atoms.

20. Combined preparation according to one of the claims 1 to 6, comprising as an active ingredient at least one compound of the general formula (XIV):

wherein  $Y_{XIV}$  is a C<sub>1-3</sub>-alkenylene group, which is optionally substituted with the substituents  $R_{XIV1}$  and  $R_{XIV2}$  and optionally substituted with the substituents  $R_{XIV3}$  to  $R_{XIV6}$ , wherein  $R_{XIV1}$  to  $R_{XIV8}$  are the same or different and are selected from the group which consists of hydrogen, hydroxy, halogen, substituted and unsubstituted alkyl groups, substituted and unsubstituted cycloalkyl-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted cycloalkoxy-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted alkoxy-(C<sub>0-26</sub>)-alkyl radicals, substituted and

unsubstituted amino groups and substituted, unsubstituted thio-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted sulfonyl-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted sulfinyl-(C<sub>0-26</sub>)-alkyl radicals and substituted or unsubstituted acyl radicals, wherein each alkyl radical, each alkoxy radical and each acyl radical may be branched or straight and each alkyl radical, each alkoxy radical and each cycloalkyl group may be saturated or unsaturated with one or more double or triple bonds and one or two carbon atoms of the cycloalkyl radicals may be replaced by nitrogen, oxygen or sulfur atoms and

R<sub>XIV13</sub> and R<sub>XIV14</sub> are defined the same as R<sub>XIV1</sub> to R<sub>XIV8</sub> or together form an oxo group, wherein Z<sub>XIV</sub> represents the organophosphorus group

wherein R<sub>XIV9</sub> and R<sub>XIV10</sub> are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted (C<sub>1-26</sub>)-alkyl groups, substituted and unsubstituted hydroxy-(C<sub>1-26</sub>)-alkyl radicals, substituted and unsubstituted cycloalkyl-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted acyl, halogen, OX<sub>XIV9</sub> or OX<sub>XIV10</sub>, wherein each alkyl radical, each alkoxy radical and each acyl radical branched or straight and each alkyl radical, each alkoxy radical and each cycloalkyl group may be saturated or unsaturated with one or more double or triple bonds and one or two carbon atoms the cycloalkyl radicals may be replaced by nitrogen, oxygen or sulfur atoms, wherein X<sub>XIV9</sub> or X<sub>XIV10</sub> are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted (C<sub>1-26</sub>)-alkyl groups, substituted and unsubstituted hydroxy-(C<sub>1-26</sub>)-alkyl radicals, substituted and unsubstituted cycloalkyl-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted acyl, a silyl, a cation of an organic and inorganic base, in particular a metal of the first, second or third main group of the periodic system, ammonium, substituted ammonium and ammonium compounds which derive from ethylene diamine or amino acids, wherein each alkyl radical, each alkoxy radical and each acyl radical may be branched or straight and each alkyl radical, each alkoxy radical and each cycloalkyl group may be saturated or unsaturated with one or more double or triple bonds and one or two carbon atoms of the cycloalkyl radicals may be replaced by nitrogen, oxygen or sulfur atoms, or wherein Z<sub>XIV</sub> represents the amino group

wherein R<sub>XIV11</sub> and R<sub>XIV12</sub> are the same or different and are selected from the group which consists of hydrogen, substituted and unsubstituted alkyl groups, substituted and unsubstituted

cycloalkyl-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted cycloalkoxy-(C<sub>0-26</sub>)-alkyl radicals, substituted and unsubstituted alkoxy-(C<sub>0-26</sub>)-alkyl radicals and substituted or unsubstituted acyl radicals, wherein each alkyl radical, each alkoxy radical and each acyl radical branched or straight and each alkyl radical, each alkoxy radical and each cycloalkyl group may be saturated or unsaturated with one or more double or triple bonds and one or two carbon atoms of the cycloalkyl radicals may be replaced by nitrogen, oxygen or sulfur atoms, wherein B<sub>XIV</sub> is selected from the group which consists of substituted and unsubstituted C<sub>1-26</sub>-alkenylene groups, wherein one C-atom may be replaced by one oxygen atom and one C-atom by one sulfur atom or two C-atoms may be replaced by a S-hetrocycle and wherein each alkenylene radical may be branched or straight and saturated or unsaturated with one or more double or triple bonds and may be substituted with one or more hydroxy groups, halogen groups or oxo groups.

21. Use of lipid metabolism inhibitors according to one of the proceeding claims for the therapeutic and prophylactic treatment of infectious processões in humans, animals and plants and as herbicides in plants.
22. Use according to claim 21, characterized in that the infectious processes are caused by unicellular or multicellular parasites, fungi, bacteria or viruses.
23. Use according to claim 21 or claim 22, characterized in that the processes are infectious processes in humans or animals.

Abstract

Combined preparation, comprising as an active ingredient at least one anti-infectiously active compound, that inhibits the 2-C-methylerythrose-4-metabolic pathway, and at least one lipid metabolism inhibitor. The combined preparation is used in infectious processes especially in infections in humans and animals and as a herbicide in plants. It is shown that the built-up of resistance against the inventive combined preparation is largely reduced compared to the individual components.

# Declaration and Power of Attorney for Patent Application

## Erklärung für Patentanmeldungen mit Vollmacht

### German Language Declaration

Als nachstehend benannter Erfinder erkläre ich hiermit an Eides Statt:

daß mein Wohnsitz, meine Postanschrift und meine Staatsangehörigkeit den im nachstehenden nach meinem Namen aufgeführten Angaben entsprechen, daß ich nach bestem Wissen der ursprüngliche, erste und alleinige Erfinder (falls nachstehend nur ein Name angegeben ist) oder ein ursprünglicher, erster und Miterfinder (falls nachstehend mehrere Namen aufgeführt sind) des Gegenstandes bin, für den dieser Antrag gestellt wird und für den ein Patent für die Erfindung mit folgendem Titel beantragt wird:

deren Beschreibung hier beigefügt ist, es sei denn (in diesem Falle Zutreffendes bitte ankreuzen), diese Erfindung

- ☐ wurde angemeldet am \_\_\_\_\_ unter der US-Anmeldenummer oder unter der Internationalen Anmeldenummer im Rahmen des Vertrags über die Zusammenarbeit auf dem Gebiet des Patentwesens (PCT) \_\_\_\_\_ und am \_\_\_\_\_ abgeändert (falls zutreffend).

Ich bestätige hiermit, daß ich den Inhalt der oben angegebenen Patentanmeldung, einschließlich der Ansprüche, die eventuell durch einen oben erwähnten Zusatzantrag abgeändert wurde, durchgesehen und verstanden habe.

Ich erkenne meine Pflicht zur Offenbarung jeglicher Informationen an, die zur Prüfung der Patentfähigkeit in Einklang mit Titel 37, Code of Federal Regulations, § 1.56 von Belang sind.

As a below named inventor, I hereby declare that:

My residence, post office address and citizenship are as stated next to my name.

I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled

**COMBINED PREPARATION OF ANTI-INFECTIOUSLY  
ACTIVE COMPOUNDS WHICH INHIBIT THE 2-C-  
METHYLERYTHROSE-4-METABOLIC PATHWAY,  
AND INHIBITORS OF LIPID METABOLISM**

the specification of which is attached hereto unless the following box is checked:

- ☐ was filed on \_\_\_\_\_ as United States Application Number or PCT International Application Number \_\_\_\_\_ and was amended on \_\_\_\_\_ (if applicable).

I hereby state that I have reviewed and understand the contents of the above identified specification, including the claims, as amended by any amendment referred to above.

I acknowledge the duty to disclose information which is material to patentability as defined in Title 37, Code of Federal Regulations, § 1.56.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

**German Language Declaration**

Ich beanspruche hiermit ausländische Prioritätsvorteile gemäß Title 35, US-Code, § 119 (a)-(d), bzw. § 365(b) aller unten aufgeführten Auslandsanmeldungen für Patente oder Erfindurkunden, oder § 365(a) aller PCT internationalen Anmeldungen, welche wenigstens ein Land ausser den Vereinigten Staaten von Amerika benennen, und habe nachstehend durch ankreuzen sämtliche Auslandsanmeldungen für Patente bzw. Erfindurkunden oder PCT internationale Anmeldungen angegeben, deren Anmeldetag dem der Anmeldung, für welche Priorität beansprucht wird, vorangeht.
